CONCLUSION
1. Introduction

With the advent of the knowledge and information technology era, intellectual capital has gained substantial importance. Consequently, Intellectual Property ("IP") and rights attached thereto have become precious commodities and are being fiercely protected. In recent years, especially during the last decade, the world has witnessed an increasing number of cross-border transactions. Companies are carrying on business in several countries and selling their goods and services to entities in multiple locations across the world. Since Intellectual Property Rights ("IPRs") are country-specific, it is imperative, in a global economy, to ascertain and analyze the nature of protection afforded to IPRs in each jurisdiction. This paper analyzes and deals with the IP law regime in India and the protections provided thereunder.

There are well-established statutory, administrative, and judicial frameworks for safeguarding IPRs in India. It becomes pertinent to mention here that India has complied with its obligations under the Agreement on Trade Related Intellectual Property Rights ("TRIPS") by enacting the necessary statutes and amending the existing statues. Well-known international trademarks were afforded protection in India in the past by the Indian courts, however, with the notification of the Trade Marks Rules, 2017 ("New Trade Mark Rules"), applicants are provided with the opportunity to apply for and obtain recognition of their marks as well-known trademarks statutorily. Computer databases and software programs have been protected under the copyright laws in India and pursuant to this; software companies have successfully curtailed piracy through judicial intervention. Although trade secrets and know-how are not protected by any specific statutory law in India, they are protected under the common law. The courts, under the doctrine of breach of confidentiality, have granted protection to trade secrets.
2. Legislation

The Trade and Merchandise Marks Act, 1958 has been replaced by the Trade Marks Act, 1999, The Copyright Act, 1957 has been amended to protect computer programs as "literary work"; The Patent Act, 1970 has been amended by the Amendment Acts of 1999 and 2002 and 2005. The Designs Act of 1911 has been completely replaced by the Designs Act of 2000.

The following laws have been enacted to protect newly recognized species of intellectual property in India:

- The Geographical Indications of Goods (Registration and protection) Act, 1999;
- The Semiconductor Integrated Circuits Layout-Design Act, 2000;
- The Protection of Plants & Varieties and Farmers Rights Act, 2001; and
- The Biological Diversity Act, 2002

These acts, and particularly the impact of recent amendments to the acts, are discussed in greater detail in the ensuing sections.
3. Trademarks

In India, trademarks are protected both under statutory law and common law. The Trade and Merchandise Marks Act, 1940 (“TM Act, 1940”) was the first law in this regard in India, which was replaced later by the Trade and Merchandise Marks Act, 1958 (“TM Act, 1958”). The Trade Marks Act, 1999 (“TM Act”) which has replaced the TM Act, 1958 came into effect on September 15, 2003 and is in compliance with the TRIPS obligations. The TM Act allows for the registration of service marks three-dimensional marks and sound marks as well. India follows the NICE Classification of goods and services, which is incorporated in the Schedule to the New Trademark Rules under the TM Act. A Trade Marks Registry had been established for the purposes of the TM Act, 1940, which has continued to function under the TM Act, 1958 and TM Act. The Trade Marks Registry is under the charge of the Registrar of Trademarks. The head office of the Trade Marks Registry is in Bombay (Mumbai) and its branches are at Calcutta (Kolkata), Delhi, Madras (Chennai), and Ahmedabad. The territorial jurisdiction of each office has also been allocated.

In addition to trademarks, the following categories of marks can also be registered under the TM Act:

- Certification marks are given for compliance with defined standards, but are not confined to any membership. Such marks are granted to anyone who can certify that the products involved meet certain established standards. The internationally accepted “ISO 9000” quality standard is an example of a widely recognized certification mark.

- Collective marks can be owned by any association. The members of such associations will be allowed to use the collective mark to identify themselves with a level of quality and other requirements and standards set by the association. Examples of such associations would be those representing accountants, engineers or architects.

I. Unconventional Marks

India’s Trade Mark Registry has begun to recognize “unconventional trademarks” and has extended trademark protection to a sound mark. On August 18, 2008, India’s first “sound mark” was granted to Sunnyvale, California-based Internet firm Yahoo Inc.’s three-note Yahoo yodel by the Delhi branch of the Trademark Registry. It was registered in classes 35, 38 and 42 for a series of goods including email, advertising and business services and managing websites.

Under the TM Act, the term ‘mark’ is defined to include ‘a device, brand, heading, label, ticket, name, signature, word, letter, numeral, shape of goods, packaging or, combination of colors, or any combination thereof.’ Thus, the list of instances of marks is inclusive and not exhaustive. Any mark capable of being ‘graphically represented’ and indicative of a trade connection with the proprietor is entitled to get registered as a trademark under the TM Act. This interpretation opens the scope of trademark protection to unconventional trademarks like sound marks provided they satisfy the ‘graphical representation’ test and are not prohibited under Section 9 and 11 of the Act. The only way the mark may be described in the application for trademark is by way of “graphical representation”.

1. Classes of Goods and Services: Classes 1 to 34 covers goods while classes 35 to 45 cover services.
II. Scope of ‘Graphical Representation’

Trademark Rules define “graphical representation” as representation of a trademark for goods or services in paper form or in digitized form. Therefore, sound marks can be represented on paper either in descriptive form e.g. kukekekuuuuu (registered as Dutch sound mark - onomatopoeia which sounds like the call of a cock) as traditional musical notations e.g. D#, E etc or in an MP3 format recording which does not exceed 30 (thirty) seconds. Such recordings are required to be in a medium which allows for clear replaying and should be accompanied by a graphical representation of its musical notations. Other alternative methods for their visual representation have also emerged like depictions by oscillogram; spectrum, spectrogram and sonogram are now being accepted in other jurisdictions. However, such representations must be handled carefully in order to meet the requirements of trademark offices in India. In the case of Yahoo’s Yodel mark, they represented the mark using musical notation.

III. Who can Apply?

Any person claiming to be the proprietor of a trademark used or proposed to be used by that person can file an application for registration. The application may be made in the name of the individual, partner(s) of a firm, a company, any government department, a trust, or even in name of joint applicants. Domestic and international applicants are treated at par. An application can also be filed on behalf of a company that is about to be incorporated or registered under the Companies Act, 2013.

IV. Is Prior use Required?

Prior use of the trademark is not a prerequisite for filing application or its registration and an application may be made for registration even if the intention of the applicants is bona fide use of the trademark in the future. In such a case, the application can be filed on a “proposed to be used basis”. However, in the case of descriptive marks, the Trade Marks Registry usually insists upon proof of use of the mark and the distinctiveness acquired through such use before granting a registration.

V. Is a Prior Search Necessary?

Though a prior search for a conflicting trademark is not a prerequisite for filing an application, it is advisable to carry out a search and maintain the search results. In opposition proceedings or in infringement / passing off actions, such search reports act as proof of honesty and good faith in the adoption of the marks.

In a move to curb the spread and sale of counterfeit drugs, the Drugs Control Department of the National Territory of Delhi has made search reports from the Registrar of Trade Marks mandatory before approving any drug manufacturing license under a particular brand name.

This initiative by the Delhi Drugs Authority is in pursuance of the Indian Supreme Court’s (“SC”) observations in the case of Cadila Health Care Ltd. v. Cadila Pharmaceuticals Ltd. (decided on March 26, 2001). If adopted in the other states in India, this provision will eliminate the

---

3. See Rule 26, The Trademarks Rules 2017
4. Section 46 of the TM Act.
5. (2001) SCL 534. In paragraph 41 of the judgment, the Supreme Court observed: “Keeping in view the provisions of Section 17-B of the Drugs and Cosmetics Act, 1940 which, inter alia, indicates an imitation or resemblance of another drug in a manner likely to deceive being regarded as a spurious drug it is but proper that before granting permission to manufacture a drug under a brand name the authority under that Act is satisfied that there will be no confusion or deception in the market. The authorities should consider requiring such an applicant to submit an official search report from the Trade Mark office pertaining to the trade mark in question which will enable the drug authority to arrive at a correct conclusion.”
chances of approval of a deceptively similar and look-alike brand of the existing products.

VI. What is the Process of Registration?

The application for trademark registration must contain a clear reproduction of the mark, including any colors, forms, or three-dimensional features along with a statement of use and an affidavit evidencing or showing usage in India, if the application is being made on a prior usage basis. These forms need to be filed with the appropriate office of the Trade Marks Registry. The sign must fulfill certain conditions in order to be protected as a trademark – or as another type of mark – and must indicate the class of goods / services to which it would apply. The TM Act has laid down absolute 6 and relative grounds of refusal 7 of trademark registration. These grounds are akin to the provisions of the UK Trademark Act of 1994.

The process of registration of trademarks under the TM Act can be explained utilizing the following diagram on the following page:

---

7. Section 11 of the TM Act.
VII. Can the Registration Process be Expedited?

After receipt of the official number of an application, the applicant may request for expedited processing of trademark application. This can be achieved by filing Form TM – M and paying a fees of INR 20,000 (if the applicant is an individual/startup/small enterprise) or INR 40,000 (if the applicant falls under none of the earlier mentioned categories) for each class in which the trademark application is being filed. Such an application shall be examined expeditiously and ordinarily within three months from the date of submission of the application. Thereafter, the following proceedings viz. the consideration of response to the examination report, scheduling of show cause hearing, if required, the publication of the application and the opposition thereto, if any, till final disposal of the application shall also be dealt with expeditiously subject to such guidelines as may be published by the Trade Marks Registry.¹⁸

VIII. What is the Term of Registration?

The registration is valid for ten years and is renewable for a subsequent period of ten years. Nonrenewal leads to a lapse of registration. However, there is a procedure whereby a lapsed registration can be restored.

IX. How can the Registration of a Trademark be Cancelled?

An application for cancellation or rectification of registration of a trademark can only be filed by the aggrieved person (e.g. prior users of the mark). Such an application must be filed with the Registrar of Trade Marks or the Appellate Board.

X. Grounds for Cancellation / Revocation

The following are some of the grounds on which the registration of a trademark can be removed or cancelled:

¹⁸. Rule 34, The Trademarks Rules 2017
The trademark was registered without any bona fide intention on the part of the applicant to use the trademark and there has been no bona fide use of the trademark for the time being up to a date three months before the date of the application for removal; or

That up to a date three months before the date of application for removal, a continuous period of five years from the date on which the trademark is actually entered on the register or longer has elapsed during which the trademark was registered and during which there was no bona fide use thereof; or

The trademark was registered without sufficient cause, or the trademark is wrongly remaining on the Register.

XI. Assignment of Trademarks

A registered trademark can be assigned or transmitted with or without the goodwill of the business concerned, and in respect of either or all of the goods or services in respect of which the trademark is registered. An unregistered trademark can be assigned or transmitted with or without the goodwill of the business concerned. However, in respect of assignment of trademarks (registered or unregistered) without goodwill of the business concerned, the prescribed procedure has to be followed, which inter alia, includes advertisement of the proposed assignment to be published in the newspapers. The Registrar of Trade Marks could impose certain restrictions and conditions for the assignment or transmission of the trademark. To be effective, the assignment or transmission must be recorded with the Registrar of Trade Marks.

XII. License of Trademarks

The TM Act provides for a registration procedure of registered / licensed users of the registered trademark. The benefit of use by the registered / license user accrues to the benefit of the mark’s proprietor. The TM Act recognizes non-registered licensed use if only such use is with the consent of the proprietor as embodied in a written agreement and if such user satisfies the prescribed conditions. Owners of Indian registered trademarks, who are located abroad, having no presence in India, can use their trademarks in India by granting licenses to the Indian parties.

XIII. Rights Conferred by Registration

The registration of a trademark gives the registered proprietor the exclusive right to use the trademark in relation to the goods or services for which it is registered and to obtain relief with respect to infringement of the same. Registration acts as a public notice to others, informing them that they should not use the trademarks which are registered or pending for registration.

XIV. Paris Convention

Reciprocity for the purpose of claiming priority is allowed from the applications originating from the Paris Convention countries if filed within 6 months from the date of priority.

10. Section 47(1)(b) of the TM Act.
11. Section 57 of the TM Act.
12. Sections 37 to 45 of the TM Act deal with the provisions of the assignment and transmission of the trade mark.
13. Section 48(2) of the TM Act
14. Section 2(1)(r) read with Section 48(2) of the TM Act.
15. Section 28 of the TM Act.
XV. Infringement of Trademark

Registration of a trademark is a prerequisite for initiating an infringement action. The following essential conditions must exist for initiation of an infringement action: 16

- The allegedly infringing mark must be either identical or deceptively similar to the registered trademark;
- The goods/services in relation to which the allegedly infringing mark is used must be specifically covered by the registration of the registered trademark;
- The use of the allegedly infringing mark must be in the course of trade; and
- The use must be in such a manner as to render the use likely to be taken as being used as a trademark.

A registered trademark is also infringed by use of a mark when because of:

- Its identity with registered trademark and similarity with goods/services covered by registration;
- Its similarity with registered trademark and identity with goods/services covered by registration; or
- Its identity with registered trademark and identity with goods/services covered by registration.

Is likely to cause confusion on the part of the public (in case 3 above, confusion is presumed), or which is likely to have an association with the registered trademark. 17

If an identical or similar mark is used with respect to goods or services which are not similar to those for which a registered trademark is registered, such use amounts to infringement if a registered trademark has reputation in India and the use of the mark without due cause takes unfair advantage of or is detrimental to the distinctive character or repute of the registered trademark. 18

Under the TM Act, the following acts would also amount to an infringement of the registered trademark:

- Use of the registered trademark as a trade name or part of the trade name dealing in same goods or services for which the registered trademark is registered; 19 or
- Use of the trademark in advertising if such advertising takes unfair advantage of and is contrary to the honest practice in industrial or commercial matters, or is detrimental to its distinctive character; or against the reputation of the trademark. 20
- Under the TM Act, even oral use of the mark can constitute infringement. 21

XVI. Who can sue for Infringement?

The registered proprietor, his heirs and the registered user(s) can sue for infringement. An assignee of a registered trademark can also sue for infringement. A passing off suit can be converted into a combined action of infringement and passing off, if the registration of the trademark is obtained before the final hearing of the passing off suit.

XVII. Passing Off

The user of an unregistered trademark is barred from instituting an infringement action. However, if the mark in question has become well known in India, the user of such a trademark is not without recourse and may seek a remedy by means of a passing off action. The purpose of this tort is to protect commercial goodwill and to ensure that one’s business reputation is not exploited. Since business goodwill is an asset and

---

16. Section 29(1) of the TM Act.
17. Sections 29(2) and (3) of the TM Act.
18. Section 29(4) of the TM Act.
19. Section 29(5) of the TM Act.
20. Section 29(8) of the TM Act.
21. Section 29(9) of the TM Act.
therefore a species of property, the law protects it against encroachment as such. In a passing off action, the plaintiff must establish that the mark, name or get-up - the use of which by the defendant is subject of the action - is distinctive of his goods in the eyes of the public or class of public and that his goods are identified in the market by a particular mark or symbol.

XVIII. Recognition of Foreign Well Known Marks & Trans-border Reputation

The New Trade Marks Rules provide applicants with the opportunity to apply for recognition of their marks as “Well-Known Trademarks” in India. To apply, an applicant is required to file Form TM – M and pay a fees of INR 1,00,000 for each trademark. The applicant is also mandatorily required to submit evidence/documents supporting the claim that the applied mark is a well-known one. The New Trade Marks Rules do not specify the kind of documents that are required to be filed in support of such an application. However, the Trademarks Registry has issued guidelines regarding the procedure to file for recognition of a trademark as a Well-Known Trademark (“Guidelines”) on May 22, 2017. The Guidelines state that an applicant may submit the following documents as evidence to support a claim for recognition of a mark as a well-known trademark, (i) any applications made or registrations obtained for the mark; (ii) duly corroborated copy of the annual sales turnover of the applicant’s business based on the mark; (iii) number of actual or potential customers of goods or services sold under the said mark; (iv) publicity and advertisements in relation to the said mark; and (v) evidence as to recognition of the mark is the relevant section of the public/consumers in India and abroad. As per the Guidelines, in addition to such evidence, an applicant is also required to submit the following documents, if available at the time of filing an application for recognition of a mark as a well-known trademark (i) copies of judgments of any court in India or the Registry wherein the said mark has been recognized as a well-known trademark; and (ii) details of successful enforcement of rights in relation to the said mark wherein the mark has been recognized as a well-known trademark by any court in India or the Trademarks Registry.

Prior to the notification of the New Trade Marks Rules, such recognition was provided via a court order/judgment, whereas now such recognition is proposed to be provided by registration of mark as a well-known mark.

XIX. Orders in Infringement and Passing off Suits

In an action for infringement of a registered trademark, or in an action for passing off for either a registered or unregistered mark, the court may order an injunction. The court may also award damages or an order for account of profits along with the delivery of the infringing marks, for destruction or erasure. In addition to the civil remedies, the TM Act contains stringent criminal provisions relating to offenses and penalties.

---

22. A “well-known trade mark” in relation to any goods or services, means a mark which has become so to the substantial segment of the public which uses such goods or receives such services that the use of such mark in relation to other goods or services would be likely to be taken as indicating a connection in the course of trade or rendering of services between those goods or services and a person using the mark in relation to the first-mentioned goods or services.

23. Rule 124 of the Trademarks Rules, 2017

24. Section 135 of the TM Act provides for identical reliefs for infringement and passing off.
4. Domain Names

Indian courts have been proactive in granting orders against the use of infringing domain names. Some of the cases in which injunctions against the use of conflicting domain names have been granted are: www.sifynet.com v. www.siffynet.com\textsuperscript{25} www.yahoo.com v. www.yahooindia.com\textsuperscript{26} and www.rediff.com v. www.rediff.com.\textsuperscript{27} In the www.yahoo.com case it has been held that “the domain name serves the same function as a trade mark, and is not a mere address or like finding number on the internet, and therefore, it is entitled to equal protection as a trademark”.

\textsuperscript{25} Satyam Infoway Ltd. v. Sifynet Solutions Pvt. Ltd. AIR 2004 SC 3540.

\textsuperscript{26} Yahoo India v. Akash Arora (1999) PTC 201 (Del).

\textsuperscript{27} Rediff Communications Limited v. Cyberbooth AIR 2000 Bom 27.
5. Copyrights

The Copyright Act, 1957 ("Copyright Act"), supported by the Copyright Rules, 1958 ("Copyright Rules"), is the governing law for copyright protection in India. Substantial amendments were carried out to the Copyright Act, in early 2012 ("Amendment"). Some of the salient amendments have been discussed in this section.

The Copyright Act provides that a copyright subsists in an original literary, dramatic, musical or artistic work, cinematograph films, and sound recordings. However, no copyright subsists in a cinematograph film if a substantial part of the film is an infringement of the copyright in any other work or in a sound recording, if in making the sound recording of a literary, dramatic or musical work, copyright in such work is infringed. A computer programme is treated as a “literary work” and is protected as such.

I. Is Copyright Registration Compulsory?

Under Indian law, registration is not a prerequisite for acquiring a copyright in a work. A copyright in a work is created when the work is created and given a material form, provided it is original. The Copyright Act provides for a copyright registration procedure. However, unlike the U.S. law, registration of a copyright in India does not confer any special rights or privileges with respect to the registered copyrighted work. The Register of Copyright acts as prima facie evidence of the particulars entered therein. The documents purporting to be copies of the entries and extracts from the Register certified by the Registrar of Copyright are admissible in evidence in all courts without further proof of the original. Thus, registration only raises a presumption that the person in the Register is the actual author, owner or right holder. The presumption is not conclusive. But where contrary evidence is not forthcoming, it is not necessary to render further proof to show that the copyright vests in the person mentioned in the Register. In infringement suits and criminal proceedings, when time is of essence to obtain urgent orders, registration is of tremendous help. Copyright notice is not necessary under the Indian law to claim protection.

II. Berne Convention and Universal Copyright Convention

India is a member of the above conventions. The Government of India has passed the International Copyright Order, 1958. According to this Order, any work first published in any country - which is a member of any of the above conventions - is granted the same treatment as if it was first published in India.

III. What Rights does Copyright Provide?

A copyright grants protection to the creator and his representatives for the works and prevents such works from being copied or reproduced without his/their consent. The creator of a work can prohibit or authorize anyone to:

- reproduce the work in any form, such as print, sound, video, etc;
- use the work for a public performance, such as a play or a musical work;
- make copies/recordings of the work, such as via compact discs, cassettes, etc;
- broadcast it in various forms; or
- translate the same to other languages.

28. Section 13 of the Copyright Act.
29. Ibid
30. Section 48 of the Copyright Act.
IV. What is the term of Copyright?

The term of copyright is, in most cases, the lifetime of the author plus 60 years thereafter.

V. First Ownership of Copyright & ‘Work for Hire’

The author of a work is usually the ‘first owner’ of such work. In certain circumstances, Section 17 of the Copyright Act determines who may be regarded as the ‘first owner’ of a copyrighted work. The concept of ‘first owner’ under Indian copyright law is quite important and may be determined as follows:

- In the case of a literary, dramatic or artistic work (which includes a photograph, painting or a portrait) created during the course of employment or, under a contract of service or apprenticeship, for the purpose of publication in a newspaper, magazine or similar periodical, the proprietor of such a publication shall, in the absence of a contract to the contrary, be the first owner of copyright. However, such ownership shall vest with the proprietor of the publication only for the limited purpose of publishing the work or a reproduction of the work in a publication and, for all other purposes, the copyright shall vest with the author of the work.

- If a photograph, painting or portrait has not been made for the purposes of publication in a periodical but has been made for any other purpose, then in the absence of a contract to the contrary, the copyright in such work shall vest with the person at whose instance the work was created.  

- In the case of a cinematograph film, in the absence of a contract to the contrary, the copyright in the cinematograph film shall vest with the producer of the film i.e. the person at whose instance the film was made for a valuable consideration.  

- In case of a work made during the course of employment or under a contract of service or apprenticeship, (to which the instances given under serial no. 1 do not apply), the employer shall, in the absence of a contract to the contrary shall be the first owner of copyright.  

- In case of a government work, in the absence of a contract to the contrary, the copyright in the work shall vest with the government.  

The concept of ‘Work for Hire’ though not expressly covered under the Copyright Act, it is implied under Section 17 whereby, the copyright in any work created on commissioned basis, shall vest with the person creating such work. In order to vest the copyright with the person commissioning the work, an assignment in writing shall be necessary.

VI. Special Monetary Rights in Underlying Works in a Cinematograph Film / Sound Recordings.

The Amendment has introduced significant monetary rights for authors of literary, musical works etc. that are incorporated in cinematograph films and sound recordings. Authors of literary or musical works (i) incorporated in films; or (ii) sound recordings (which are not part of films) have the right to receive royalties equal to the royalties received by the assignee of such rights for exploitation of their works (other than communication to public of that film in cinema halls). These rights cannot be assigned or waived by the right holders (except in favor of legal heirs and copyright societies). Any agreement that seeks to assign or waive the above rights shall be

---

31. Proviso (a) and (b) to Section 17 of the Copyright Act.
32. Proviso (b) to Section 17 of the Copyright Act.
33. Proviso (c) to Section 17 of the Copyright Act.
34. Proviso (d) to Section 17 of the Copyright Act.
void. While the language in the Amendment is not very clear from the debates surrounding the Amendment, it seems that scriptwriters/screenplay writers are intended to be covered within the scope of these provisions.

- Further, no assignment of the copyright in any work to make a cinematograph film or sound recording can affect the right of the author of the work to claim royalties or any other consideration payable in case of utilization of the work in any form other than as part of the cinematograph film or sound recording.

- The business of issuing or granting license in respect of literary, dramatic, musical and artistic works incorporated in a cinematographic film or sound recordings post the amendment can be carried out only through a copyright society duly registered under the Act.

**VII. Assignment of Copyright**

As mandated by Section 19, no assignment of copyright shall be valid unless such assignment is in writing and signed by the assignee and the assignee. Such assignment ought to identify:

- the work and the rights assigned;
- the territorial extent and;
- the duration of the assignment.

Where, the territorial extent and the duration of the assignment has not been specified, it shall be deemed that the assignment extends to the territory of India and the duration of assignment is for a period of five years respectively.

Under Section 18 of the Copyright Act, even the copyright in a future work can be assigned in accordance with Section 19, however, such assignment shall come into effect only upon date of creation of the work. It has now been added by the Amendment that no assignment shall be applied to any medium or mode of exploitation of the work, which did not exist or was not in commercial use at the time when the assignment was made, unless the assignment specifically referred to such medium or mode of exploitation of the work.

**VIII. Moral Rights**

Section 57 of the Copyright Act grants an author “special rights,” which exist independently of the author's copyright, and subsists even after the assignment (whole or partial) of the said copyright. The author has the right to (a) claim authorship of the work; and (b) restrain or claim damages with respect to any distortion, mutilation, modification, or other act in relation to the said work if such distortion, mutilation, modification, or other act would be prejudicial to his honor or repute. These special rights can be exercised by the legal representatives of the author. Before the Amendment the right to claim authorship could not be exercised by legal representatives of the author. Now, post death of the author, if he is not given credit for his work, then even legal representatives, may be able to take necessary action to remedy such breach. As per the Amendment, the right against distortion is available even after the expiry of the term of copyright. Earlier, it was available only against distortion, mutilation etc. done during the term of copyright of the work.

**IX. Rights Related to Copyright**

A field of rights related to copyright has rapidly developed over the last 50 years. These related rights have developed around copyrighted works and provide similar, though more limited protection. Such rights are:

**A. Performers’ Right**

When any performer (e.g., an actor or a musician) appears or engages in any performance, he has this special right in relation to his performance. The Amendment has modified the definition of “Performer” by clarifying that that in a cinematograph film a person whose performance is casual or incidental in nature and is not acknowledged in the credits of the film shall not be treated
as a performer except for the purpose of attributing moral rights. The term of this right is 50 years from the beginning of the calendar year following the year of performance. The “Performer’s Right” is stated to be the exclusive right subject to the provisions of the Act, to do or authorize for doing any of the following acts in respect of the performance or any substantial part thereof, namely:

i. to make a sound recording or a visual recording of the performance, including—
   a. reproduction of it in any material form including the storing of it in any medium by electronic or any other means;
   b. issuance of copies of it to the public not being copies already in circulation;
   c. communication of it to the public;
   d. selling or giving it on commercial rental or offer for sale or for commercial rental any copy of the recording;

ii. to broadcast or communicate the performance to the public except where the performance is already broadcast. Once a performer has by written agreement consented to the incorporation of his performance in a cinematograph film he shall not in the absence of any contract to the contrary object to the enjoyment by the producer of the film of the performers rights in the same film. However, the performer shall be entitled for royalties in case of making of the performances for commercial use.

B. Broadcast Reproduction Right

Every broadcasting organization has this right with respect to its broadcasts. The term of this right is 25 years from the beginning of the calendar year following the year in which the broadcast is made.

X. International Confederation of Societies of Authors and Composers (CISAC) v. Aditya Pandey & ors

In the case of “International Confederation of Societies of Authors and Composers v Aditya Pandey & Ors” Civil Appeal Nos. 9414-9415 of 2016 (Arising out of S.L.P(c) nos. 21082-21083 of 2012), the Supreme Court upheld the decision of the division bench of the Delhi High Court in “IPRS v Aditya Pandey & Ors” (FAO(OS) No.423-442/2011 ) and “IPRS v CRI Events & Ors” (FAO(OS) No.425/2011 and CM No.19128/2011 ). The main issue involved in the appeal to the Supreme Court is as follows, “Where lyric written by ‘X’ (lyricist) and music composed by ‘Y’ (musician) are used to make sound recording by ‘Z’ (Sound Recording Company), whether ‘A’ (Event Management Company/Event Organizer) is required to seek license from ‘X’ and ‘Y’ for subsequently playing the song in public even after ‘A’ had paid for the broadcasting of the song to ‘Z’ (Sound Recording Company) ?”

The division bench of the Delhi High Court had held that when a literary or musical work is incorporated in a sound recording, the rights in the literary and musical works (i.e. the lyrics and music) are effectively assumed by the owner of the rights in the sound recording. As such, if one were to publicly play a sound recording, one would only need to acquire the permission of the owner of the rights in the sound recording and not the permission of the owners of the rights in the underlying works.

IPRS, being the Appellant contended that authors of literary work and composers of musical work are the first owners of copyright in lyric and musical work respectively under the Copyright Act, 1957 (“Copyright Act”) and resultanty they can restrain the event

---

35. Section 38 of the Copyright Act.
36. Section 37 of the Copyright Act.
37. International Confederation of Societies of Authors and Composers (CISAC) v. Aditya Pandey & ors, 2016 SCC OnLine SC 967
management company (Respondent) from infringing their copyright. Therefore the license given to the sound recording company does not affect the rights of lyricist or the musician. Reference was made to the definition of expression “communication to the public” defined under Section 2(f) of the Copyright Act \(^{38}\) and that of ‘performance’ defined in Section 2(q) of the Copyright Act. \(^{39}\)

Further, reference was made to the amendment introduced in 1994 in the Copyright Act, 1957 and it was pleaded that the right created under Section 14(a)(iv) of the Copyright Act \(^{40}\) cannot be read in derogation of right created under Section 14(a)(iii) of the Copyright Act. Additionally, it was contended that the judgment of the Delhi High Court stands in direct conflict with India’s obligations under the Berne Convention and the TRIPS Agreement and it effectively places India out of step with international copyright norms and practice.

The Respondent on the other hand contended that the amendment made in the Copyright Act, 1957, in the year 2012, states that the producer of sound recording has an independent copyright of his work. It relied effectively on the judgment of the Supreme Court in, “Indian Performing Right Society Ltd. v. Eastern Indian Motion Pictures Association” \(^{41}\) wherein it was held that “once the author of a lyric or a musical work parts with a portion of his copyright, by authorizing a film producer, or producer of sound recording in respect of his work, a right exists with the latter to exhibit his work to the public.”

The Supreme Court affirmed the decision of the division bench of the Delhi High Court and held that when a literary or musical work is incorporated in a sound recording, the rights in the literary and musical works (i.e. the lyrics and music) are effectively assumed by the owner of the rights in the sound recording. As such, if one were to publicly play a sound recording, one would only need to acquire the permission of the owner of the rights in the sound recording and not the permission of the owners of the rights in the underlying works.

This judgment has effectively clarified that

1. There is no obligation on an individual or body corporate (“Licensee”) to obtain a separate license from the owner of the copyright in the underlying literary or musical work that is incorporated in the sound recording at the time of obtaining a license from the copyright holder in the sound recording.

2. As per the law after the Copyright Amendment Act (2012) (“Copyright Amendment Act”), copyright holders in the underlying works in sound recordings or cinematographic films are still entitled to claim royalties at the time of economic exploitation of the sound recording or cinematographic film even though they had assigned their copyright in its entirety to the producer of such sound recording or cinematographic film, it has been clarified that this obligation is not solely placed on the Licensee at the time of obtaining a license from the producer or copyright holder in the sound recording or the cinematographic film.

3. At the time of broadcasting of the sound recordings, a license is only required from the PPL/Phonographic Performance Limited (which deals with sound recordings public performance of sound recordings requires a license only from) and not from the IPRS/ Indian Performing Right Society Limited (which deals with literary and musical works). On the other hand, when the sound recording is publically performed wherein an individual is singing the song, then a license is required from IPRS/ Indian Performing Right Society Limited or any other such society which deals with literary and musical works.

---

\(^{38}\) Section 2(f) of the Copyright Act

\(^{39}\) Section 2(q) of the Copyright Act

\(^{40}\) Section 14(a)(iv) of the Copyright Act

\(^{41}\) 1977 SCR (3) 206
XI. Infringement of a Copyright

A copyright is infringed if a person without an appropriate license does anything that the owner of the copyright has an exclusive right to do. However, there are certain exceptions to the above rule (e.g., fair dealing). The Copyright Act provides for both civil and criminal remedies for copyright infringement. When an infringement is proved, the copyright owner is entitled to remedies by way of injunction, damages, and order for seizure and destruction of infringing articles.

India being a common law country, also accepts the common law principle of passing off of works. While there is no statutory provision, if the courts find that the original work is well-known enough, a remedy may lie in an action for passing off. The purpose of this tort is to protect commercial goodwill created in that work (e.g., film or television serial) and to ensure that one’s business reputation is not exploited. A remedy in the form of an injunction or damages would lie in such cases and may be granted by the Courts.

XII. Importation of Infringing Copies

The Amendment has introduced a revised Section 53, which provides a detailed procedure where the owner of the copyright can make an application to the Commissioner of Customs (or any other authorised officer) for seizing of infringing copies of works that are imported into India.

XIII. Copyright Protection of Software

By the 1994 amendment of the Copyright Act, an inclusive definition of the term “Literary Work” was inserted to read: “Literary Work includes computer programmes, tables and compilations including computer databases.” The terms tables, compilations, and computer database have not been defined in the Copyright Act.

XIV. Rights Conferred

The owner of a computer programme (“CP”) has the exclusive right to do or authorize third parties to do the following acts: reproduction of the CP, issuing copies to public, perform / communicate it to public, to make translation or adaptation of the work, to sell or give on commercial rental or offer for sale or for commercial rental any copy of the CP. However, the commercial rental provision does not apply if the CP itself is not an essential part of the rental. Any violation of these exclusive rights amounts to an infringement.

XV. Infringement – Defenses

Section 52 of the Copyright Act enlists the acts that do not constitute copyright infringement. If the lawful possessor of the CP makes copies or adaptation of the CP in the following circumstances, they do not constitute infringement: (1) for utilizing the CP for the purpose for which it was supplied; or (2) to make backup copies purely as a temporary protection against loss, destruction or damage. Further, to obtain information essential for operating inter-operability of an independently created the CP with other the CP, the lawful possessor can do any act, provided such information is not readily available. Observation, study or test of functioning of the CP to determine the ideas

42. Section 51 of the Copyright Act.
43. Section 52 of the Copyright Act.
44. Per Section 2 (ff) of the Copyright Act: “Computer includes any electronic or similar device having information processing capabilities.”
45. Per Section 2 (ff) of the Copyright Act: “Computer Programme means a set of instructions expressed in words, codes, schemes or in any other form, including a machine readable medium, capable of causing computer to perform a particular task or achieve a particular result.”
46. Section 2(o) of the Copyright Act.
47. Any use of work involving rearrangement or alteration.
and principles that underline any elements of the CP (while performing such acts necessary for the function for which the CP is supplied), does not amount to infringement. Making of copies or adaptation of the CP from a personally legally obtained copy for non-commercial personal use is also allowed. The fair dealing defense is not available in the case of a CP.

All in all, it is currently obvious that while Plaintiffs have the choice of initiating a suit at a place where they carry out business, it is essential that this must be the principal place of business or the place where the cause of action has emerged completely as opposed to, a branch office where no cause of action has emerged.

**XVI. Registration**

For registration of CP, a practice has developed wherein the first 25 and last 25 pages of the source code are deposited with the Registrar of Copyright. There is no specific provision for the deposit of the source code on any specified media. In any event, such deposit is not advisable. Since the only advantage of registration is that it acts as prima facie proof, other means could be adopted to prove date of creation, ownership of copyright, and other details with respect to the same (e.g., deposit of the CP in a safe deposit locker, posting of the CP to a lawyer or one’s own address). Further, maintenance of logbooks recording the details of the development of CP could also act as proof of date of creation and ownership.

**XVII. Offences**

Knowingly making use on a computer of an infringing copy of CP is a punishable offence.\(^{48}\) The penalty for such an offence is imprisonment (minimum of seven days and maximum of three years) and a fine (minimum INR\(^{49}\) 50,000 and maximum INR 2,00,000). If the offender proves that such use was not for gain in the course of trade or business, the court may waive imprisonment and grant a fine up to INR 50,000.

**XVIII. Copyright Societies**

The primary function of a copyright society (also generally referred to as ‘collecting society’) is to administer the rights on behalf of its members and grant licenses for the commercial exploitation of these rights. Such a society collect the license fee or the royalty on behalf of its members, which is then conveyed to the members after making deductions for the expenses borne for collection and distribution.

At present, in accordance with section 33 of the Copyright Act, the following are registered as copyright societies:

- Indian Performing Rights Society or IPRS, which administers the rights relating to musical and lyrical works on behalf of its members which primarily include authors, composers and the publishers of musical and lyrical works.

- The Indian Singers’ Rights Association (“ISRA”) which administers performers rights on behalf of its members, which include several notable Indian singers.

The following are private copyright societies which act on behalf of the first owners of the work:

- Phonographic Performance Limited or PPL administers the commercial exploitation of phonograms or sound recordings on behalf of its members.

- Society for Copyright Regulation of Indian Producers for Film and Television or SCRIPT, which acts on behalf of the producers or the copyright owners of cinematograph and television films to protect their copyright therein.

- Indian Reprographic Rights Organization or IRRO, which administers the rights relating to reprographic (photocopying) works on behalf of its members who are essentially authors and publishers of printed works such as books, newspapers, and periodicals.

---

\(^{48}\) Section 63B of the Copyright Act  
\(^{49}\) Indian Rupees.
The Amendment has brought in significant changes to the provisions dealing with Copyright Societies. The Amendment permits authors of the work to be members of the Copyright Societies as opposed to only owners of works. Copyright Societies are required to have governing bodies consisting of equal number of authors and owners of work for the purpose of administration of the society. All members of the Copyright Society shall enjoy equal membership rights and there shall be no discrimination between authors and owners in the distribution of royalties. The Amendment also envisages the Copyright Societies registered under the Act to administer the rights of the performers and broadcasters. The provisions applicable to the authors’ societies including the new tariff related provision specified below are applicable in relation to such societies.

The Amendment has also inserted a new Section 33A providing for the following:

- Every copyright society is required to publish its Tariff Scheme in a prescribed manner;
- Any person who is aggrieved by the tariff scheme may appeal to the Copyright Board and the Board may, if satisfied after holding such inquiry as it may consider necessary, make such orders as may be required to remove any unreasonable element, anomaly or inconsistency therein;
- However, the aggrieved person is required to pay to the copyright society any fee as may be prescribed that has fallen due before making an appeal to the Copyright Board and shall continue to pay such fee until the appeal is decided. The Board has no authority to issue any order staying the collection of such fee pending disposal of the appeal;
- The Copyright Board may after hearing the parties fix an interim tariff and direct the aggrieved parties to make the payment accordingly pending disposal of the appeal.

In light of the Amendment and the obligations imposed on copyright societies, the Delhi High Court in its judgment in “M/S Event and Entertainment Management Association v Union of India” in December 2016 restrained IPRS, PPL and Novex Communications from issuing or granting copyright licenses by holding that the aforementioned entities were in breach of Section 33 of the Copyright Act.50 The interim order passed by the Delhi High Court has restricted all three of the aforementioned entities from carrying out any actions violative of Section 33 of the Copyright Act.51

XIX. Compulsory Licenses and Statutory Licenses

A compulsory license (CL) is an involuntary license issued for a copyrighted piece of work that the copyright owner has to grant for the use of their rights in the work against payment as established under law in case the Copyright Board concludes that the copyrighted piece of work is withheld from the public. Under the Act, the CL provisions under Section 31 (in relation to published work) and 31A (in relation to unpublished or anonymous work) were earlier restricted only to Indian works. The Amendment seeks to remove this limitation. The provisions have now been made applicable to all works. A new provision has been inserted where the work may be made available under CL for the benefit of people suffering from disabilities.

The Amendment has introduced the concept of “statutory license” in relation to published works. Any broadcasting organization, that proposes to communicate the a published work to the public by way of broadcast (including television and radio) or a performance of any published musical/ lyrical work and sound recording, may do so by giving prior notice of its intention to the owners of the rights. Such prior notice has to state the duration and territorial coverage of the broadcast and pay royalties for each work at the rate and manner fixed by the Copyright Board. The rates fixed for television broadcasting shall be different than that fixed

---

50. Section 33 of the Copyright Act
51. Id
for radio broadcasting. In fixing the manner and the rate of royalty, the Copyright Board may require the broadcasting organization to pay an advance to the owners of rights. No fresh alteration to any literary or musical work, which is not technically necessary for the purpose of broadcasting, other than shortening the work for convenience of broadcast, shall be made without the consent of the owners of rights. The names of the author and the principal performer will have to be announced with the broadcast (unless communicated by way of the performance itself). Records and books of accounts will have to be maintained by the Broadcasting Organizations and reports will be required to be given to the owners of the rights. The owners are also granted audit rights against the broadcasting organizations.

XX. Copyright vis-à-vis design

When can something obtain protection under the copyright act vis-a-vis the design act is a predominant concern. Section 15 of the Copyright act states that copyright cannot subsist in a registered design. Further, the same section details that a copyright would cease to exist in any work to which the design is connected and has been imitated or replicated more than 50 times by an industrial process. The Supreme Court in Dart Industries Inc. & Ors. v Techno Plast & Ors, had further clarified that, unless a work of art is equipped for design protection and has been registered as a design, or ought to have been registered as a design, the copyright in the basic artistic work subsists independent of design rights. 52

XXI. Statutory License for Cover Versions

The Act pursuant to the Amendment provides for the grant of statutory licenses for making “cover versions”. Cover version may be made only of such literary, dramatic or musical work, in relation to which a sound recording has already been made by or with the license or consent of the owner of the right in the work. Cover version can be made only after the expiration of five calendar years, after the end of the year in which the first sound recordings of the original work was made. Cover version shall not contain any alteration in the literary or musical work, which has not been made previously by or with the consent of the owner of rights, or which is not technically necessary for the purpose of making the sound recordings.

Cover version shall not be sold or issued in any form of packaging or with any cover or label which is likely to mislead or confuse the public as to their identity, and in particular shall not contain the name or depict in any way any performer of an earlier sound recording of the same work or any cinematograph film in which such sound recording was incorporated. Cover version should state on the cover that it is a cover version made under Section 31C of Act.

52. Dart Industries Inc. & Ors. v Techno Plast & Ors, 2007 SCC Online Del 892 : (2007) 141 DLT 777
6. Patents

In India, the law governing patents is the Patents Act, 1970 ("Patents Act"). In India's continued efforts to comply with its commitment under TRIPS the Patents Act has been amended thrice since 1995, by the Patents (Amendment) Act, 1999 ("First Amendment"), the Patents (Amendment) Act, 2002 ("Second Amendment") and Patents (Amendment) Act, 2005 ("Third Amendment"). Prior to the Third Amendment, the President of India had promulgated Patents (Amendment) Ordinance, 2004 ("Ordinance"), which was later replaced by the Third Amendment. The legislation is supported by the Patents Rule, 2003 ("Rules"), which were recently amended in 2016. The following outlines the current Indian patent law framework.

Which Inventions are Patentable?

Not all innovations are “inventions” within the definition of the Patents Act. The term “invention” is defined under Section 2(1) (j) of the Patents Act as “a new product or process involving an inventive step” and capable of industrial application.” Thus, the traditional aspects of novelty, inventive step, and industrial application/utility have been specifically included in the definition of the term “invention”.

I. Novelty

If the invention was known or used by any other person, or used or sold by the applicant to any person in India and/or outside India, then the applicant would not be entitled to the grant of a patent. Public use or publication of the invention will affect the validity of an application in India. The patent application must be filed prior to any publication or public use. However, there is a 12-month grace period permitted in India when a person has made an application for a patent in a convention country and if that person or his legal representative (or his assignee) makes an application with respect to the same invention in India. Although patent rights are essentially territorial in nature, the criteria of novelty and non-obviousness are to be considered on a worldwide basis. Any earlier patent, earlier publication, document published in any country, earlier

---

54. Section 2(1) (ja) of the Patents Act: “inventive step means a feature of an invention that involves technical advance as compared to the existing knowledge or having economic significance or both and that makes the invention not obvious to a person skilled in the art.”
55. Section 2(1) (ac) of the Patents Act: “capable of industrial application in relation to an invention means that the invention is capable of being made or used in an industry.”
product disclosing the same invention, or earlier disclosure or use by the inventor will prevent the granting of a patent in India.

II. Inventive Step

The Patent Act, under Section 2(1)(ja) defines ‘Inventive Step’ as “means a feature of an invention that involves technical advance as compared to the existing knowledge or having economic significance or both and that makes the invention not obvious to a person skilled in the art”. Therefore for an invention to be non-obvious/ have an inventive step, it should involve

i. technical advance when compared to the existing knowledge;

ii. having economic significance; or

iii. both

and such an invention should not be obvious to a person skilled in the art.

For the purpose of this section, a person skilled in the art is a is a hypothetical person who is presumed to have practiced in the relevant field of invention and have knowledge of the prior arts as on the date of the application.

III. Industrial Application

The Act defines ‘capable of industrial application’ in relation to an invention as capable of being made or used in an industry.

An invention is capable of industrial application if it satisfies the three conditions cumulatively:

can be made;
can be used in at least one field of activity;
can be reproduced with the same characteristics as many as necessary.

IV. Inventions That are Not “Inventions”

Section 3 of the Patents Act enlists the innovations that are not classified as “inventions” within the meaning of the Act.

These may fall within the definition of the expression “invention,” but the Patents Act expressly excludes them from the definition. Innovations that are not inventions within the meaning of the Patents Act, and accordingly are not patentable in India, include: (i) a method of agriculture or horticulture; (ii) a process for the medicinal or other treatment of human beings and animals; (iii) a mere discovery of any new property, or new use for a known substance, or a mere use of a known process, machine, or apparatus (unless such known process results in a new product or employs at least one new reactant); and (iv) an invention which is frivolous or which claims anything obviously contrary to well established natural laws.

By the Second Amendment, the following have been added to the innovations that are not inventions within the meaning of the Patents Act:

“j. plants and animals in whole or any part thereof other than micro-organisms but including seeds, varieties and species and essentially biological processes for production or propagation of plants and animals;

k. a mathematical or business method or a computer program per se or algorithms;

l. a literary, dramatic, musical or artistic work or any other aesthetic creation whatsoever including cinematographic works and television productions;

m. a mere scheme or rule or method of performing mental act or method of playing game;

n. a presentation of information;

o. a topography of integrated circuits;

p. an invention which, in effect, is traditional knowledge or which is an aggregation or duplication of known properties of traditionally known component or components.”
Interesting omissions are those of business methods and computer programs per se.

V. Business Method Patents

Historically, in nearly every country “business methods” were dismissed as abstract and hence, were considered to be unpatentable. However, in the late 1990s, in what is known as the State Street Bank case the US Federal Circuit for the first time allowed a business method patent and a patent for a computer program to track mutual funds. In Bilskiv. Kappos, the US Supreme Court dwelled into the issue of business method patents and held that the US Patent Act does contemplate business method patent and thus business method patent are not excluded subject matter.

However, traditional requirements of practical utility, novelty, and non-obviousness have to be satisfied. The European Patent Convention ("EPC") explicitly excludes business method patents from patentability. However the EPC also states that business methods are excluded from patentability only to the extent to which a European patent application relates to a business method i.e. “as such”. The European Technical Board of Appeal has held time and again that if the subject matter of the application can be shown to have a technical character i.e. it is not a mere business method. In India, due to the express exclusion of “business method” from patentable inventions, business method patents cannot be granted.

VI. Computer Programs Per Se

The 2002 Amendment to the Patents Act stated that “computer programs per se” is not an “invention” raising a debate whether a computer program (“CP”) with any additional features such as technical features, would be patentable. In Sec 3(k) of the Act, while maintaining that CP per se is not an invention, the Ordinance had created exclusion for certain CPs. CP, in its technical application to industry and CP in combination with hardware were identified as patentable inventions. This exclusion introduced by the Ordinance has been done away with by the Third Amendment, once again creating an ambiguity in respect of grant of CP patents. ‘Computer programs per se’ was interpreted, based on similar UK law, that CP’s with a technical effect could be patentable. Experts were already interpreting ‘computer programs per se’ on similar lines. Ordinance, made things even clearer. However, now it may be difficult to use the same interpretation as it could be argued that if the intention of the statute was to allow patenting CP’s having a technical effect, why did the lawmakers not retain the language of the Ordinance. Thus there is now additional uncertainty in interpretation of ‘computer programme per se’.

VII. Pharma and Agro-Chemical Patents

The Third Amendment has deleted Section 5 of the Act, which barred patent being granted in respect of substances:

- intended for use or capable of being used as food, medicine, or drugs; or,
- prepared or produced by chemical processes (including alloys, optical glass, semiconductors and inter-metallic compounds).

---

56. 149 F.3d 1368.
57. 130 S. Ct. 3218.
58. The court looked into the definition of "process" in § 100(b) includes the word “method” which comprehends a presence of a business method. Further, 35 U.S.C. § 273(b) (1) also provides a defense to patent infringement for prior use of a "method of conducting or doing business" this clearly shows that the statute contemplates business method patents because it provides for a defense of patent infringement relating to business method patents. Id at page 10 and 11.
59. Article 52 (2) (c) of the EPC excludes methods for doing business from patentability.
Thus, product patents for pharmaceutical substances are allowed in India. Section 3 of the Act, however, carves out certain exceptions. Under Section 3 (j) plants and animals in whole or any part thereof (other than microorganisms) including seeds, varieties and species and essentially biological processes for the production of plants or animals – cannot be patented. This is in line with Article 27.3 of TRIPS. Thus micro-organisms, which satisfy the patentability criteria, may be patented in India.

Section 3(d) as amended by the Third Amendment clarifies that mere discovery of a new form of a known substance, which does not result in the enhancement of the known efficacy of that substance is not an invention and therefore not patentable. For the purposes of this clause, salts, esters, ethers, polymorphs, metabolites, pure form, particle size, isomers, mixtures of isomers, complexes, combinations and other derivatives of known substances are to be considered to be the same substances, unless they differ significantly in properties with regard to efficacy. Therefore, “Swiss Claims” are not allowed in India.  

VIII. Section 3(d), Reads as

“Section 3. The following are not inventions within the meaning of this Act, (d) the mere discovery of a new form of a known substance which does not result in the enhancement of known efficacy of that substance or the mere discovery of any new property or new use for a known substance or that the mere use of a known process, machine or apparatus unless such known process results in a new product or employs at least one new reactant.

Explanation- For the purposes of this clause, salts, esters, ethers, polymorphs, metabolites, pure form, practical size, isomers, and mixtures of isomers, complexes, combinations and other derivatives of a known substance shall be considered the same substance, unless they differ significantly in properties with regard to efficacy.”

This provision had caused quite a stir when it was enacted primarily by Big Pharma as this Section was enacted to prevent evergreening of patents. Further, since there was not much clarity on how known substances are to be determined, what efficacy is and how to prove enhancement of efficacy a lot of litigation surrounding this Section was being initiated at various judicial and quasi-judicial forums as the patent office had rejected many pharmaceutical patent application under Section 3 (d). The most seminal case in this regard was the Swiss pharmaceutics giant, Novartis AG (“Novartis”) rejection of its Indian patent application for the beta crystalline form of Imatinib Mesylate filed in July 1998 on the grounds of Section 3 (d) when the application was examined post 2005. This case finally made it to the Indian Supreme Court (“SC”) which delivered a landmark judgment on April 1, 2013, rejecting Novartis Patent application.

A. Novartis AG vs. Union of India

Novartis AG (“Novartis”) had filed an Indian patent application for the beta crystalline form of Imatinib Mesylate in July 1998. Due to the impending change in patent regime, the application was “kept in mailbox”. The application received five pre grant oppositions. In 2006, the application was rejected on the basis that the application lacked novelty, was obvious and was not an invention in view of Section 3(d) of the Act. The Controller held that the Product was a new version of an older molecule that Novartis first patented in 1993 and the increment in efficacy is not substantial enough to receive the grant of a patent. An appeal was preferred before the Madras High Court, during the pendency of which, the case was transferred to the Intellectual Property Appellate Board (“IPAB”). The IPAB upheld the decision of the Controller with respect to the finding that the patentability of the drug was barred under Section 3(d). A Special Leave
Petition was filed by Novartis in the Indian Supreme Court ("SC") appealing against the decision of the Controller. The SC made an exception and admitted the Special Leave Petition side-stepping the jurisdiction of the Madras High Court, in view of the importance of the case and the number of seminal issues that were involved in the case. The SC noted that this was an exception and any attempt directly challenging an IPAB order before the SC side-stepping the High Court, was strongly discouraged.

The invention as claimed in the patent application was the beta-crystalline form of Imatinib Mesylate. This was a derivative of the free base form called Imatinib disclosed vide example 21 of a patent application filed by Novartis in US on April 2, 1993 ("Zimmermann patent").

Novartis’ argument was that the known substance was Imatinib as disclosed in Zimmerman patent from which beta-crystalline form of Imatinib Mesylate was derived and that the substance immediately preceding beta-crystalline form of Imatinib Mesylate was Imatinib and not Imatinib Mesylate as the Zimmerman patent did not disclose Imatinib Mesylate. The SC rejected this argument after examining the evidence on record and concluded that the known substance was Imatinib Mesylate from which beta-crystalline form of Imatinib Mesylate was derived.

Since the term “efficacy” is not defined in the Act, the SC referred to the Oxford Dictionary and observed that Efficacy means “the ability to produce a desired or intended result”. Accordingly the SC observed that the test of efficacy depends “upon the function, utility or the purpose of the product under consideration”. Therefore, the SC held that in case of medicines, whose function is to cure disease, the test of efficacy can only be “therapeutic efficacy”.

In relation to “enhanced efficacy”, the SC held that the parameters for proving enhanced therapeutic efficacy especially in case of medicines should receive a narrow and a strict interpretation. However, the SC pointed out that just because the word ‘efficacy’ has to be given a strict interpretation under Section 3(d), that does not in any way mean that it bars all incremental inventions of chemical and pharmaceutical substances. Essentially Section 3(d) provides a bar that incremental inventions of chemical and pharmaceutical substances need to pass in order to be patentable.

The SC had concluded that the known substance was Imatinib Mesylate and not free base Imatinib. However, all the evidence submitted by Novartis compared the efficacy of the Product with that of Imatinib, but there was no evidence provided by Novartis which compared the efficacy of the Product with that of Imatinib Mesylate.

However, SC went on to examine the expert affidavits submitted by Novartis according to which the following properties exhibited by the Product demonstrated its enhanced efficacy over Imatinib:

i. more beneficial flow properties;
ii. better thermodynamic stability;
iii. lower hygroscopicity; and
iv. 30 % increase in bio-availability.

The SC held that the first three properties of the Product related to improving processability and storage, thus they did not in any way demonstrate enhancement of therapeutic efficacy over Imatinib Mesylate as required to pass the test of Section 3(d). The SC came to this conclusion even though the affidavits submitted by Novartis compared the Product over Imatinib.

The SC after this was left with 30 % increase in bio-availability, with regard to this the SC held that increase in bioavailability could lead to enhancement of efficacy but it has to be specifically claimed and established by research data. In this case the SC did not find any research data to this effect other than the submission of the counsel and material “to indicate that the beta-crystalline form of Imatinib Mesylate will produce an enhanced or superior efficacy (therapeutic) on molecular basis than that could be achieved with Imatinib free base in vivo animal”.

In view of the above findings, the SC held and concluded that Novartis claim for the Product...
failed the test of patentability under Section 3 (d) of the Act.

These Rules were issued by Ministry of Commerce and Industry on October 26, 2015 and invited comments. Further in 2016 amendment to Indian Patent Rules, 2003 came into effect on May 2016. The amendment seeks to have a huge impact on the patent filing and prosecution strategy.

While the entire filing system has been digitized, some of the other important changes brought about by these rules are as follows:

- An additional category of “startups” has been added for the type of applicant and specific legal assistance and monetary benefits are also extended to such startups.
- Reduction in filing Response to FER: The time to file response to FER is now reduced by six months from the previous deadline of one year with a possibility of an extension of three months.
- Remote Hearings: The hearings can be conducted through video-conferencing or audio-visual communication.

63. Rule 2(fb) of the 2016 Rules: Startup means an entity, where-
   (i) more than five years have not lapsed from the date of its incorporation or registration;
   (ii) the turnover for any of the financial years, out of the aforementioned five years, did not exceed rupees twenty-five crores; and
   (iii) it is working towards innovation, development, deployment or commercialisation of new products, processes or services driven by technology or intellectual property:

Provided that any such entity formed by splitting up or reconstruction of a business already in existence shall not be considered as a startup.

Provided further that the mere act of developing:
   a. products or services or processes which do not have potential for commercialisation, or
   b. undifferentiated products or services or processes, or
   c. products or services or processes with no or limited incremental value for customers or workflow, would not be covered under this definition.

- Expedited examination of application: A new form 18 A has been introduced in the rules for expediting the process.64

X. Who can be the Applicant?

India grants patent right on a first-to-apply basis. The application can be made by either (i) the inventor or (ii) the assignee or legal representative of the inventor. Foreign applicants are given national treatment.

XI. What is the Process of Registration?

Patent rights with respect to any invention are created only upon grant of the patent by the Patent Office following the procedure established by the Patents Act and the Rules. India follows a declarative system for patent rights. Below are the three types of applications that may be filed in the Indian Patent Office:

i. Regular Application

ii. Convention Application

India has published a list of convention countries under Section 133 of the Patents Act and is also a member of the Paris Convention. The convention application has to be filed within one year from the date of priority and has to specify the date on which, and the convention country in which the application for protection (first application) was made. The priority document has to be filed with the application.

65. Section 2(1) (ab) of the Patents Act: “Assignee includes an assignee of the assignee and the legal representative of the deceased assignee and references to the assignee of any person include references to the assignee of the legal representative or assignee of that person”.

66. Section 2(1) (k) of the Patents Act: “Legal representative means a person who in law represents the estate of a deceased person.”
iii. Patent Cooperation Treaty (PCT)  
National Phase Application  

A National Phase Application may be filed in India as India is a PCT member country. Since December 2007, the Indian Patent Office has also been recognized as one of the many International Searching Authorities (ISA) and International Preliminary Examining Authorities (IPEA) nominated by World Intellectual Property Organization (WIPO). The office is expected to soon start operations in this capacity.

The procedure for filing and obtaining patent in India is as shown overleaf.
XII. Opposition Proceedings

The Patents Act allows both pre-grant and postgrant opposition. The pre-grant opposition can be filed anytime after the publication of the patent application but before a patent is granted. The postgrant opposition can be filed within a period of one year from the date of publication of the granted patent. The grounds on which pre-grant opposition and post-grant opposition can be filed are similar.

XIII. What is the term of a Patent?

Every patent granted under the Act shall be dated as of the date on which the complete specification was filed. The Second Amendment prescribed a uniform term of 20 years from the date of filling the patent application in India for all categories of patents in compliance with Article 33 of TRIPS. There is no provision for an extension of the patent term. Term of patent in case of applications filed under the PCT designating India is twenty years from the international filing date.

XIV. Secrecy Provisions

Any person resident in India is not allowed to apply for grant of patent for any invention unless either of the following two conditions is satisfied:

- Obtaining written permission of the Controller of Patents. The Controller is required to obtain consent of the Central Government before granting such permission for invention relevant for defense purpose / atomic energy. The application is to be disposed of within 3 months.

OR

- Patent application for the same invention has been first filed in India at least six weeks before the application outside India and there is no direction passed under Section 35 for prohibiting / restricting publication / communication of information relating to invention.

This section is not applicable in relation to an invention for which an application for protection has first been filed in a country outside India by a person resident outside India. Inspite of this exclusion, this provision is likely to delay the filing of US applications since US applications are required to be filed by the inventors and not assignees of the inventors.

67. Section 53 of the Patents Act.
68. Explanation to Section 53 of the Patents Act
XV. Can the Patent be Surrendered?

A patentee may surrender his patent under Section 63 at any time by giving notice to the Controller in the prescribed manner.

XVI. How can the Patent be Cancelled / Revoked?

Either the Intellectual Property Appellate Board (IPAB) by way of a revocation application filed under Section 64 of the Patent Act or the High Court by way of a counter-claim in a suit for infringement of the patent may pass orders for revocation of a patent. In a patent infringement action, the defendant can raise the grounds for cancellation as defenses and at the same time file a counterclaim for revocation. The grounds on which the patent can be revoked include wrongful procurement of invention, false suggestion or representation in obtaining patent, failure to disclose corresponding foreign applications, prior secret use, prior grant, lack of novelty, or obviousness. The Controller of Patents also has the power to revoke the patent if, despite the grant of a compulsory license, the reasonable requirements of the public with respect to the patented invention remain unsatisfied or if the patented invention is not available to the public at a reasonable price.

XVII. Assignment / Mortgage / License of Patent

An assignment of a patent or a share in a patent, a mortgage, license, or the creation of any other interest in a patent is only valid if the following conditions are satisfied:

- There is a written agreement embodying all the terms and conditions governing rights and obligations of parties; and,
- The agreement is registered by filing Form 16 under the Patents Rules, 2003 with the patent office that has granted the patent.

Registration can be done at any time after the assignment is done.

However, the agreement, when registered, is effective as of the date of its execution. The consequence of non-registration is that the agreement under which the patent rights are transferred is not admissible as evidence in an Indian court and therefore not enforceable in legal proceedings.

XVIII. Working of a Patent

It is mandatory under Indian patent law to file a statement as to the extent of commercial working in the Indian territory of a patent granted by Indian Patent Office. The statement embodied in Form 27 of the Patents Rules, 2003 is required to be filed in respect of every calendar year within three months of the end of each year (i.e. before March 31st of every year). Non-compliance with this requirement may invite penalty of imprisonment which may extend to six months, or with fine, or with both, as provided under section 122(1) (b) of the Patents Act. Section 83 of the Patents Act states “that patents are granted in India to encourage inventions and to secure those inventions are worked in India on a commercial scale and to the fullest extent reasonably practicable without undue delay”.

XIX. Compulsory Licensing

The Patent Act provides for the grounds on and procedures by which, a compulsory license can be granted. The grounds on which a compulsory license can be granted are:

- Reasonable requirements of the public with respect to the patented invention have not been satisfied; or,

---

70. Section 68 of the Patents Act. Section 69 describes the procedure for the recording of interest.
71. Section 69(5) of the Patents Act.
72. Section 146 of the Patents Act and Rule 131(2) of Patents Rules, 2003.
The patented invention is not available to the public at a reasonably affordable price; or,

The patented invention is not worked (i.e. not used or performed) in the territory of India.

The following factors are also to be taken into account: a circumstance of national emergency; a circumstance of extreme urgency; or a case of public non-commercial use, which may arise or is required, as the case may be, including public health crises such as those relating to Acquired Immuno Deficiency Syndrome (AIDS), Human Immunodeficiency Virus (HIV), Tuberculosis, Malaria, or other epidemics.

However, the Patents Act does not provide the definitions of the following expressions: “circumstance of national emergency”; and “a circumstance of extreme urgency.” Therefore, the courts would be required to interpret these expressions on a case-by-case basis.

Any person interested in working the patented invention may apply to the Controller of Patents for a compulsory license at any time after three years have elapsed from the date of grant of the patent. While examining the application, the Controller also considers such aspects as the nature of the invention; the time that has elapsed since the grant of the patent and the measures already taken by the patentee or any licensee to make full use of the invention; the ability of the applicant to work the invention for public advantage; and the capacity of the applicant to undertake the risk in providing capital and working the invention, if the application were granted. 73

Section 92A provides for grant of license to manufacture and export the patented product to any country having insufficient or no manufacturing capacity in the pharmaceutical sector to address public health problems, provided a compulsory license has been granted in that country or, if such country has allowed importation of the patented pharmaceutical products from India. The amendment seeks to implement the Para 6 of Doha Declaration on TRIPS and public health. This provision will allow Indian companies to produce and export AIDS drugs to African and South East Asian countries.

A. Natco v Bayer74 and Compulsory License cases in India

In March 2012, the Controller General of Patents created history with a landmark judgment granting the first ever Compulsory License to an Indian generic company. It permitted Natco Pharma to manufacture and sell a generic version of Bayer Corporation’s patent protected anti-cancer drug ‘Sorafenib Tosyalte’ (marketed as NEXAVAR). The drug was useful in treating advanced liver and kidney cancer. Natco had filed an application for Compulsory License under Section 84(1), Patents Act, 1970. It had earlier approached Bayer with a request for a voluntary license proposing to sell the drug at a greatly reduced price, which Bayer did not allow. The Controller found that all the three conditions75 required for the grant of compulsory license were fulfilled and that this case merited the award of compulsory license to Natco. On appeal, the IPAB held that Bayer did not meet the reasonable requirement of the public (as only 2% patients are eligible for the same) and that the price of the drug (Rs. 2.8 lakhs per month) was not reasonably affordable in India when the purchasing power of the public is taken into consideration. This was the first case in which a request under Section 84 of the Indian Patent Act, 1970 had been made, seeking the grant of compulsory license.

Since the Bayer-Natco decision, there have been two more instances where Compulsory Licenses have been applied for. In the first instance, the Health Ministry applied to the Department of Industrial Policy and Promotion for the grant of Compulsory License for cancer

73. Section 84 of the Patents Act.

75. (a) that the reasonable requirements of the public with respect to the patented invention have not been satisfied, or (b) that the patented invention is not available to the public at a reasonably affordable price, or (c) that the patented invention is not worked in the territory of India.
drug Trastuzumab, which was marketed in India as Herceptin by Genentech and Herclon by Roche. The request was made under Section 92 of the Patents Act, 1970, which allows the Government to file for a license in case of national emergency. This was on the ground that the drug was not affordable. However, the DIPP rejected this request as it found that the requirements for grant of compulsory license under Section 92 of the Indian Patent Act, 1970 was not satisfied.

A request was also made by Indian generic drug manufacturer, BDR Pharmaceutical with respect to cancer drug Dacatinib, marketed by Bristol Myers Squibb as Sprycel under Section 84 of the Indian Patents Act for grant of compulsory license. An order was passed by the Controller of Patents on 29th October, 2013 wherein the compulsory licensing application was rejected on the basis that a prima facie case had not been made out since BDR had not followed the procedural requirements as prescribed under the law before applying for the compulsory license application. In view of this the Controller of Patents did not go into the merits and rejected the compulsory license application.

B. Rights of the Applicant Post Publication

From the date of publication of the application until the date of the grant of a patent, the applicant has the like privileges and rights as if a patent for the invention has been granted on the date of publication of the application. However, applicant is not entitled to institute any proceedings for infringement until the patent has been granted.

XX. Infringement

Section 48 of the Act grants the following rights to the patentee.

In the case of a product patent, the following actions would amount to infringement:

- making,
- using,
- offering for sale,
- selling, or
- importing for these purposes, the product in India without the permission of the patentee.

In the case of a process patent, the following would amount to infringement:

- using,
- offering for sale,
- selling, or
- importing for these purposes the product obtained directly by that process in India without the permission of the patentee.

Any person without the consent of the patentee performs the above activities of the infringes the patent.

In patent infringement suits, the damages are not granted for the use of the patented invention during the period prior to the date of acceptance of the patent application.

In a patent infringement action, the defendant can file a counterclaim for a revocation of the patent. Consequently, the main suit and the counterclaim are heard together.

A. What acts do not Constitute Infringement?

Section 107A in the Act, incorporates Bolar provision and provision for parallel imports. Section 107A states that the following acts do not constitute infringement:

- Any act of making, constructing, using, selling or importing a patented invention solely for uses reasonably related to the development and submission of information required under any Indian law, or law of a country other than India, that regulates the manufacture, construction, use, sale or import of any product;
- The importation of patented products by any person from a person who is duly authorized by the patentee under the law to produce and sell or distribute the products.
i. Bolar Provision

In view of introduction of the product patent regime, this provision will gain importance. Bolar provision allows manufacturers to begin the research and development process in time to ensure that affordable equivalent generic medicines can be brought to market immediately upon the expiry of the product patent.

ii. Parallel Imports

A machine, though patented in India, can be imported (without the consent of the patentee) from the patentee’s agent, say, in China, who manufactures it at a lower cost with the consent of the patentee.

B. Reversal of Burden of Proof

The Second Amendment also inserted Section 104A concerning the burden of proof in infringement suits. The section provides that in any suit for infringement of a process patent, the defendant may be directed to prove that the process used by him to obtain the product that is identical to the product of the patented process, is different from the patented process. Such direction may be passed by the court, if:

- the subject matter of the patent is a process for obtaining a new product; or,
- there is a substantial likelihood that the identical product is made by the process, and the patentee or a person deriving title or interest in the patent from him, has been unable through reasonable efforts to determine the process actually used.

However, before obtaining such a direction, the plaintiff (claimant) has to prove that the product is identical to the product directly obtained by the patented process.

C. Remedies in the Case of Infringement

In the case of infringement of the Indian patent, the patentee can file a suit in the appropriate court, which may be a District Court or a High Court. In case a patent infringement suit is filed in a district court and counter claim is filed by a defendant, the patent infringement suit is transferred to a High Court. In the infringement suit the plaintiff can seek an injunction and damages or order for an account for profits from the potential infringer of the patent. Where the defendant proves that at the time of infringement he was not aware of and had no reasonable ground to believe that the patent existed, an order for damages or accounts for profits is not granted. Therefore, the patentee should take steps to convey to the general public that his product or process is patented. In an infringement suit, infringing goods, materials, and equipment used for their production can be seized, forfeited, or destroyed. The courts can appoint suo motu, or on application of a party to the suit, scientific advisors to assist the court or to submit a report on a specified question.77

The Patents Act does not provide for criminal action in case of patent infringement.

XXI. Patent Linkage

Internationally recognized patent linkage is a process by which the drug regulatory authority (the Drug Controller) delays or refuses to grant marketing approval to a generic manufacturer to manufacture and sell the drug, if the drug is patented. In effect it links the marketing approval to the lifetime of the patent. Such a system would require the generic manufacturer to demonstrate before the Drug Controller that the drug for which the marketing approval is sought for is not covered by a patent.

In Bayer vs. Cipla,78 Bayer had filed a writ petition requesting the court to direct the Drug Controller of India not to grant license to market Cipla’s drug “Soranib” as it infringed Bayer’s Patent.

Bayer contended that Section 48 of the Patents Act, which grants right to the patentee and

76. Section 108 of the Patents Act.
77. Section 115 of the Patents Act.
78. 2009(41)PTC634(Del)
Section 2 of the Drugs and Cosmetics Act (DCA), should be read together. Section 2 of the DCA provides that the DCA shall not be in derogation of any other law and thus the DCA cannot contravene the provisions of the Patent Act. Therefore, any grant of license to CIPLA for its drug “Soranib” by the drug controller would be in contravention of section 48 of the Patents Act and it is in contravention of Section 2 of the DCA, when read together. Thus, the drug license should not be granted. Further, Form 44 of the DCA\textsuperscript{79} also requires applicant to mention the patent status of the drug in question in the application, this shows a conscious effort by the legislature to include patent linkage.

The court held that the Patents Act and the DCA are two separate legislations and highlight distinct and disparate objectives. The DCA prescribes standards of safety and good manufacture practices, which are to be followed by every pharmaceutical industry whereas, Patent Act prescribes standards for conferring private monopoly rights in favor of inventors. Expertise that exist under the Patent Act to adjudicate upon whether claimed products or processes are patentable or not does not exist with the officials under the DCA, who can only test the safety of the product, and ensure that it conforms to the therapeutic claim put forward. The drug controller also lacks the jurisdiction under the law to adjudicate on the issue of patent infringement. Further the court held that there is no intention on the part of the legislators to place patent superintendence, or policing powers, with Drug authorities. If the Drugs authorities, on a representation of the patentee were to refuse licenses or approval, to applicants who otherwise satisfy the requirement of the Drugs Act and its provisions, or even be precluded from examining such applications, on assumed infringement, various provisions of the Patent Act would be rendered a dead letter.

The court also held that the requirement of indication of patent status in Form 44 is only to indicate bio availability and bio equivalence protocol and does not in any way suggest the intention of the legislature to include patent linkage.

\textsuperscript{79} Form 44: Application for grant of permission to import or manufacture a New Drug or to undertake clinical trial.
7. Designs

Industrial designs in India are protected under the Designs Act, 2000 ("Designs Act"), which replaced the Designs Act, 1911. The Designs Act has been in effect since May 11, 2001. The Designs Rules, 2001 have been framed under the Designs Act. The Designs Act incorporates the minimum standards for the protection of industrial designs, in accordance with the TRIPS agreement. It provides for the introduction of an international system of classification, as per the Locarno Classification. The Designs Rules, 2001, were amended on 30th December 2014, to specifically include “small entity” as an additional class of applicant.

I. What is the Meaning “Design” Within the Scope of the Designs Act?

As per the Designs Act, “design” means only the features of shape, configuration, pattern, ornament or composition of lines or colours applied to any “article” whether in two dimensional or three dimensional or in both forms, by any industrial process or means, whether manual, mechanical or chemical, separate or combined, which in the finished article appeal to and are judged solely by the eye. However, “design” does not include any mode or principle of construction, or anything which is in substance a mere mechanical device, and does not include any trademark (as defined in section 2(1)(v) of the Trade and Merchandise Marks Act, 1958), or property mark (as defined in section 479 of the Indian Penal Code), or any artistic work (as defined in Section 2(c) of the Copyright Act, 1957).

In order to obtain registration under the Designs Act, the design must be applied to an article. In other words, a mere painting of a natural scene or its presentation on paper is not entitled for registration under the Designs Act.

II. Who can Apply for Registration of a Design?

Any person claiming to be the "proprietor of any new or original design" not previously published in any country and is not contrary to public order or morality can apply for the registration of the design. The expressions “public order” or “morality” have not been defined in the Designs Act.

The term “original,” with respect to design, means a design originating from the author of such a design and includes the cases that, although old in themselves, are new in their application. Absolute novelty is now the criterion for registration.

III. What is the Process of Registration?

The process of registration of a design under the Designs Act requires the following steps:

- File an application for registration of design with the prescribed fee with the Controller of Patents and Designs. Photographs of the articles from all angles must be filed along with the statement of novelty.

---

80. Per Section 2(a) of the Designs Act: “article” means any article of manufacture and any substance, artificial, or partly artificial and partly natural; and includes any part of an article capable of being made and sold separately.

81. Per Section 2(j) of the Designs Act: “proprietor of a new or original design”:
   (i) where the author of the design, for good consideration, executes the work for some other person, means the person for whom the design is so executed;
   (ii) where any person acquires the design or the right to apply the design to any article, either exclusively of any other person or otherwise, means, in the respect and to the extent in and to which the design or right has been so acquired, the person b whom the design or right is so acquired; and
   (iii) in any other case, means the author of the design; and where the property in or the right to apply, the design has devolved from the original proprietor upon any other person, includes that other person.
Reply to the objections raised by the Controller.

Upon removal objections, the design is registered. When registered, a design is deemed to have been registered as of the date of the application for registration.

After registration, the particulars of the design are published.

If the Controller rejects the application, the aggrieved person can appeal to the High Court.

There is no opposition procedure prior to registration.

IV. What are the Rights Conferred by Registration?

Registration of a design confers upon the registered proprietor a “copyright” with respect to the design. Under the Designs Act, the word “copyright” refers to the exclusive right to apply the design to any article in any class in which the design has been registered. The first term of registration is ten years after which it can be renewed for an additional five-year period.

V. Assignment

When a person becomes entitled by assignment, transmission, or other operation of law to the copyright of a registered design, a record of the title must be registered with 6 months of such assignment by an application to the Controller for the same, accompanied by the prescribed fee and proof of title.

When a person becomes entitled to any right in the registered design either by way of a mortgage, a license, or otherwise, an application in the prescribed form must be made to the Controller to register his title.

VI. Cancellation of Design

Any person interested may present a petition for a cancellation of the design registration at any time after the registration, on the following grounds: that the design has been previously registered in India; that it has been published in India or in any other country prior to the registration date; that the design is not a new or original design; that the design is not registrable under the Designs Act or that it is not a design as defined under Section 2(d) of the Designs Act. An appeal from any order by the Controller can be filed with the High Court.

Section 15 of the Copyright Act, 1957 states that the copyright in any design, which is capable of being registered under the Designs Act, but is not, will lose its copyright as soon as the design has been reproduced 50 times by an industrial process by either the owner of the copyright or his licensee.

VII. Piracy

Section 22 of the Designs Act lists the different acts that amount to piracy of the registered design, including: 1) any application of the registered design for the purpose of sale during the existence of the copyright in the design without a license or the express consent of the registered proprietor; 2) or the importation for sale without the consent of the registered proprietor of any article belonging to the class in which the design has been registered and having applied to it the design or any fraudulent or obvious imitation; or, 3) knowing that the design, or a fraudulent or obvious imitation has been applied to any article in any class of articles in which the design is registered, published, or exposed for sale, without the consent of the registered proprietor of such an article. Any grounds on which the design can be cancelled can also be used as a defense in an infringement action.
VIII. Remedies

The Designs Act provides for civil remedies in cases of infringement of copyright in a design, but does not provide for criminal actions. The civil remedies available in such cases are injunctions, damages, compensation, or delivery-up of the infringing articles.

IX. Paris Convention

Reciprocity for the purpose of claiming priority is now allowed from the applications originating from the Paris Convention countries.
Geographical Indications ("GI") are those, which identify a good as originating in a place where a given quality, reputation, or other characteristic of the good is essentially attributable to its geographical origin. Some better-known examples of GI are “Champagne,” “Bordeaux,” and “Chianti,” the first two being regions in France and the third, a region in Italy, all famous for their wines. In the Indian context, ‘Darjeeling Tea’ was the first GI registered under the GI Act. This GI is registered in the name of the Tea Board of India which also hold GI registrations for ‘Nilgiri Tea’ and ‘Assam Tea’. Similarly, the Coffee Board (under the Ministry of Commerce & Industry) has a subsisting registration for Malabar Coffee. Other well-known GIs include ‘Kashmiri Pashmina’, ‘Mysore Silk’, ‘Lucknow Chicken Craft’ and ‘Feni’. The convention application for ‘Champagne’ was filed in September 2008 and is in the process of registration.

The Geographical Indications of Goods (Registration and Protection) Act, 1999 came into effect on September 15, 2003. The Act was passed with the goal of providing protection, as a GI, to any agricultural, natural, or manufactured goods, or to any goods of handicraft or industry, including foodstuffs.

I. Registration

The Act provides for the registration of a GI and the ‘authorized user’ thereof. Any person claiming to be the producer of goods in respect of a registered GI can apply for registering him as an authorized user. The authorized user is able to bring an action against the wrongful users of GI. Convention applications can also be filed under this Act.

An application for registration can be filed by any:-

- organisation of persons or producers, or
- organisation or authority established by or under any law, such organisation or authority representing the interest of the producers of the concerned goods.

The office of the Geographical Indications Registry is in Chennai.

To qualify as a GI, two requirements must be satisfied: (i) the territorial aspect i.e. as to how the GI serves to designate the goods originating from the concerned territory, (ii) a given quality, reputation, or other characteristic should be essentially attributable to the geographical origin.

II. Rights Conferred by Registration

Registration of a GI confers the following rights on the registered proprietor and the authorized users:

- Right to obtain relief in respect of the infringement of the GI; and
- Exclusive right to use the GI in relation to the goods for which GI is registered.

Two or more authorized users of a registered GI shall have co-equal rights.

III. Classes

All the goods have been classified in accordance with the International Classification of Goods for the purposes of GI registration.

IV. Duration and Renewal

GI registration is valid for a period of ten years, and may be renewed thereafter from time to time. The registration of an authorized user is valid for a period of ten years or for the period until the date on which the GI registration expires, whichever is earlier.
V. Procedure for Registration

The procedure for registering a GI and procedure for registering oneself as an authorized user are substantially the same. The procedure is as follows:

FILE APPLICATION WITH THE GEOGRAPHICAL INDICATIONS REGISTRY

AFTER ACCEPTANCE, THE APPLICATION IS ADVERTISED FOR OPPOSITION

IF AFTER PUBLICATION THE APPLICATION HAS NOT BEEN OPPOSED AND THE OPPOSITION PERIOD (3 MONTHS EXTENDABLE FOR 1 MONTH THEREAFTER) HAS EXPIRED, THEN REGISTRATION IS GRANTED. THE DATE OF REGISTRATION IS THE DATE ON WHICH THE APPLICATION IS FILED

VI. Prohibition of Assignment or Transmission

GI, being a public proprietary right, is not assignable or transmissible by any other means. Therefore, the Act prohibits the assignment, transmission, licensing, pledge, or mortgage or any such other agreement in respect of a GI.

VII. Infringement

The Act also provides for infringement and passing off actions, thus recognizing the common law right in a GI, which includes civil as well as criminal remedies. Infringement has been defined to include unfair competition.

An action for infringement of a GI may be initiated in a District Court or High Court having jurisdiction. Available relief includes injunctions, discovery of documents, damages or accounts of profits, delivery up of the infringing labels, and indications for destruction or erasure. The Act also provides for a sentence of imprisonment for a period of 6 months to 3 years and/or a fine of an amount between INR 50,000 to INR 2,00,000 in actions relating to infringement of a GI.

This Act was enacted in order to comply with the provisions of TRIPS. The Semiconductor Integrated Circuits Layout Design Act, 2000 received the assent of the President of India on September 4, 2000, after it was approved by both Houses of the Indian Parliament. However, the Act has not come into effect yet. The obligations imposed under the TRIPS and the Washington Treaty, 1980 made it mandatory for India to enact a law to protect the layout designs of Integrated Circuits (“IC”). This form of protection is quite different from patents, industrial designs, and copyrights, although the principles of protection and enforcement stem from industrial design and copyright.

As the Act has not come into effect yet, the existing patent and copyright regime does not appropriately accommodate the requirements of protection for the layout design of IC. This is because in the context of layout design of IC, the concept of “originality” is of utmost significance, whether it is “novel or not”, whereas the patent law requires that the idea should be original and novel. On the other hand, the copyright law is too general to accommodate the original ideas of scientific creation of layout designs of IC.

In order to ascertain the nature of protection which will be conferred on layout designs of IC on the coming into force of this Act, we have analyzed some of the salient features of the Act in the following paragraphs.

I. Definitions

A. Layout Design

Layout design refers to a layout of transistors and other circuitry elements and includes lead wires connecting such elements and expressed in any manner in a semiconductor integrated circuit.

B. Semiconductor Integrated Circuit

Semiconductor Integrated Circuit means a product having transistors and other circuitry elements, which are inseparably formed on semiconductor material or insulating material, or inside the semiconductor material, and designed to perform an electronic circuitry function.

II. IC layout Designs not Registrable in India

The following are layout-designs, which cannot be registered in India;

(a) those which are not original; or (b) those which have been commercially exploited anywhere in India or in a convention country, or (c) those which are not inherently distinctive; or (d) those which are not inherently capable of being distinguishable from any other registered layout-design.

82. Per Section 7: A layout design which has been commercially exploited for not more than two years from the date on which an application for its registration has been filed either in India or in a convention country shall be treated as not having been commercially exploited for the purposes of this Act.
III. Procedure for Registration of Layout Designs

FILE APPLICATION WITH THE SEMICONDUCTOR INTEGRATED CIRCUITS LAYOUT DESIGN REGISTRY

AFTER ACCEPTANCE, THE APPLICATION IS ADVERTISED FOR OPPOSITION

IF AFTER PUBLICATION THE APPLICATION HAS NOT BEEN OPPOSED AND THE OPPOSITION PERIOD (3 MONTHS EXTENDABLE FOR 1 MONTH THEREAFTER) HAS EXPIRED, THEN REGISTRATION IS GRANTED. THE DATE OF REGISTRATION IS THE DATE ON WHICH THE APPLICATION IS FILED

IV. What are the Rights Granted to the Registered Proprietor?

Registration provides the registered proprietor the exclusive right to use the layout design and provides protection against infringement.

V. What is the Term of Registration?

The term of registration is for a period of ten years from the date of filing an application for registration or from the date of its first commercial exploitation anywhere in India or in any country, whichever is earlier.

VI. Infringement of Layout Designs

Reproducing, importing, selling, or distributing for commercial purposes a registered layout design or a semiconductor IC incorporating such a design constitutes infringement. However, if reproduction of the layout design is for purposes of scientific evaluation, analysis, research or teaching, this shall not constitute infringement.

VII. Penalty for Infringement

Any person found to be infringing a registered layout design can be punished by way of imprisonment for a maximum of three years and/or a fine (minimum INR 50,000 and maximum INR 1,000,000).
10. The Protection of Plant and Varieties and Farmers Rights Act, 2001

This Act was enacted to give effect to Article 27.3(b) of the TRIPs Agreement relating to protection of plant varieties. India opted to protect them under a sui generis system and passed the Act.

The Act includes:

- Protection of varieties developed through public and private sector research;
- Protection of varieties developed and conserved by farmers and traditional communities, providing them with legal rights to save, use, sow, re-sow, exchange, share, or sell their farm seed, although farmer shall not be entitled to sell branded seed of a variety protected under this Act;
- Encouraging plant breeders and researchers to develop new and improved varieties;
- Establishment of the Protection of Plant Varieties and Farmers’ Rights Authority ("PPV&FRA") for the registration of new varieties and determine claims of benefit sharing to such varieties;
- Provision of civil and criminal relief for infringement and passing off of protected plant varieties; and
- Provisions for granting compulsory licenses when reasonable requirements of the public have not been satisfied.

The Act strikes a balance between the rights of farmers and breeders by rewarding the farmers/local communities from the pool of National Gene Fund for their conservation and development efforts and, at the same time, ensuring reward for innovation by granting plant breeders' rights.

I. Varieties Registerable under the Act

The following are registerable under the Act:

i. a new variety if it confirms the criteria of novelty, distinctiveness, uniformity and stability; and
ii. an extant variety if it confirms the criteria of novelty, distinctiveness, uniformity and stability as specified under Protection of Plant Varieties and Farmers’ Rights Regulations, 2006.

‘Extant Variety’ has been defined under the Act to mean:

i. a variety notified under Section 5 of the Seeds Act, 1966;
ii. a farmer’s variety (which has been defined to mean a variety traditionally cultivated and evolved by the framers in their fields or a variety which is relative or land race of a variety about which the farmers possess common knowledge);
iii. a variety about which there is common knowledge; or
iv. any other variety which is in public domain

II. Term of Protection

As prescribed under Section 24 of the Act, the total period of validity of registration shall not exceed:

i. eighteen years, in case of trees and vines;
ii. fifteen years, in case of extant varieties; and

---

83. Article 27.3(b) of TRIPs requires member countries to either grant patent protection plant varieties or to protect them under a sui generis system.

84. Section 14 of the Act
85. Section 2(1)(j) of the Act
86. Section 2(1)(l) of the Act.
iii. fifteen years, in any other case.
The certificate of registration issued under this Act is valid for nine years in case of trees and vines and six years in case of other crops and a registrant is required to renew the same for the remaining period of registration.

III. Setting up of PPV & FRA

The PPV&FRA was set up in November, 2005 for registration of new varieties and determine claims of benefit sharing to such varieties. The Authority is located in New Delhi. This Authority has already evolved the detailed rules and regulations and crop specific guidelines for seeking this protection. A National Plant Variety Registry has been set up by PPV&FR under the Union ministry of agriculture to register crop varieties.

IV. Registration of Plant Varieties now Possible in India

The Act has started documentation and registration of varieties of 12 crops which include the following: rice, wheat (bread wheat types), maize, sorghum (jowar), pearl millet (bajra), chickpea (chana), pigeon pea (arhar), green gram (mung), blackgram (urad), lentil (masur), field pea (matar) and kidney bean (rajmah).
11. The Biological Diversity Act, 2002

India is a member of the Convention on Biological Diversity (“CBD”). To comply with its obligation under the CBD, this Act has been enacted. This Act aims to ensure the conservation of biological diversity in India, sustainable use of its components and fair and equitable sharing of the benefits arising out of the use of biological resources. “Biological diversity” means the variability among living organisms from all sources and the ecological complexes of which they are part, and includes diversity within species or between species of eco-systems. “Biological resources” means plants, animals and micro-organisms or parts thereof, their genetic material and by-products (excluding value added products) with actual or potential use or value, but does not include human genetic material.

Only selective provisions of the Biodiversity Act, 2002 – namely, definition provisions, provisions relating to the constitution of the National Biodiversity Authority (“NBA”) and rule-making powers of Government – have been brought into force with effect from October 1, 2003. NBA regulates the commercial / other uses of biodiversity by both Indian and non-Indian entities. Prior to seeking any form of IPR in respect of biological resources, the applicant will be required to obtain approval of the NBA.

The Act confers extensive powers on the NBA with regard to protection of biological resources. The NBA will consist of a chairperson, seven ex-officio members representing ministries and departments of the Federal Government, and five non-official members who are specialists, scientists and representatives from the industry. The ex-officio members include representatives from the tribal affairs ministry, biotechnology, ocean development, the Indian systems of medicine and homeopathy, and the ministries of environment and agriculture.

Some of the salient provisions of the Act are as follows:

- All foreign individuals, associations and organizations would be required to seek the prior approval of the NBA to access any biological resource or the results of research occurring in India, for any use. The NBA’s approval would also have to be obtained before biological resources can be exported out of India. Proposals have been made to set up biodiversity funds and management committees at national, state, and municipal levels.

- All Indian citizens would have to seek the NBA’s prior approval to transfer the results of research relating to any biological resource to foreigners. The term “foreigners” has been defined as “individuals who are not Indian citizens”.

- Indian citizens, including local people and communities, vaids and hakims (native Indian doctors) will have free access to biological resources for use within the country for any purpose. However, the NBA’s prior approval would be required before seeking any form of IPR on an invention based on a biological resource.

- The NBA will have the power to impose conditions to ensure a share in the benefits accruing from the acquisition of IPRs.
12. Confidential Information & Trade Secrets

Confidential information and trade secrets are protected under the common law and there are no statutes that specifically govern the protection of the same. In order to protect trade secrets and confidential information, watertight agreements should be agreed upon, and they should be supported by sound policies and procedures.

I. Protection of Confidential Information in the Hands of Employees

In this information age, it’s imperative that a business protects its new formula, product, technology, customer lists, or future business plans. In the global marketplace, Indian corporations are often required to comply with foreign laws and are likely to be exposed to liabilities for violation of confidential information or trade secrets of their business partners or third parties. For example, the U.S. Economic Espionage Act, 1996 imposes criminal liability (including fines and prison sentences) on any person who intentionally or knowingly steals a trade secret, knowingly receives, or purchases a wrongfully obtained trade secret. The standards for protection have to be tailored to address the risks associated with rapid advancement in technology and communications. The standards accepted today may become inadequate tomorrow. However, one constant factor is the presence of a corporate culture imbued with information protection values.

The employees of an organization are privy to confidential information and trade secrets on a daily basis. In the absence of any specific Indian statute conferring protection on such information in the hands of employees, recourse has to be taken to common law rights and contractual obligations.

II. Non-Disclosure Agreements

Sound and concise company policies and nondisclosure agreements with the employees protecting confidential information and trade secrets are recommended so as to provide contractual remedy in addition to the one under the common law. Such agreements should define “confidential information” and the exceptions to confidentiality. Agreements should have clauses negating a grant of an implied license, restrictions on disclosure, use and copy; restriction on use of confidential information upon termination of the employment, return of information upon termination and right to withhold salary and emoluments till such return.

Non-compete clauses, depending upon their applicability in the Indian context, read with the confidentiality clauses would afford an organization added protection with respect to its confidential information. Such provisions must have a clear purpose, which is to restrict the use of confidential information and trade secrets obtained during employment and ensure that employees do not compete unfairly. However, non-compete provisions would need to be reasonable, and the Indian courts may treat a tough non-compete provision as unenforceable.

In order to ensure that the rights of third parties are not violated, the non-disclosure/employment agreement should clearly impose an obligation on the employee not to integrate into the organization’s data or intellectual property, any confidential information of a third party. Employees should be required to indemnify the organization in case of violation of this clause. If the organization has not executed such agreements at the time of employment, subsequently executed agreements should expressly cover the confidential information obtained by the employee from the date of his employment.
III. Internal Processes

Strong internal controls and processes to protect confidential information should be in place. Employees should be educated to identify information that is confidential or in the nature of a trade secret, to enable them to make an informed decision. They should have a clear understanding of their responsibilities to protect confidential matter and treat this as an on-going process that is integral to their work. Data that is confidential should be clearly indicated as such in all communications. Appropriate security procedures must be established and followed by the company and access to specific sensitive areas of workplace restricted or limited to certain senior employees only.

Third-party interaction and disclosures should be channeled only through specified personnel. Wherever feasible, confidential information should only be shared with those employees who have a legitimate need to know such information, thus enabling the employees to perform the assigned tasks.

IV. An Exit-Interview

During such an interview, an employee should be reminded of his obligations with respect to the company’s confidential information and trade secrets and should be asked to sign a document reaffirming his obligations. If an employment agreement was signed, the document to be signed upon termination should be attached. A copy of the signed exit-interview form, including the employment agreement, must be given to the employee. Such an interview not only serves as a meaningful reminder but can also be valuable evidence of employee’s knowledge of such obligations.

Success of suits for protection of confidential information and trade secrets depends upon production of satisfactory evidence to prove confidentiality of the information, act of disclosure and the damages caused thereby, as well as the reasonability of such restriction.

Enactment of a strong statute for protection of confidential information and trade secrets would certainly help the Indian industry. In any event, strategies for protection of the organization’s confidential information and trade secrets have, in today’s economic scenario, become a prerequisite to the organization’s survival.
13. International Conventions

India is a signatory to the following international conventions:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Date</th>
</tr>
</thead>
<tbody>
<tr>
<td>Berne Convention</td>
<td>April 1, 1928 (Party to convention)</td>
</tr>
<tr>
<td>Universal Copyright Convention</td>
<td>January 7, 1988 (Ratification)</td>
</tr>
<tr>
<td>Paris Convention</td>
<td>December 7, 1998 (Entry into force)</td>
</tr>
<tr>
<td>Convention on Biological Diversity</td>
<td>June 5, 1992 (Signature and ratification)</td>
</tr>
<tr>
<td>Patent Cooperation Treaty</td>
<td>December 7, 1998 (Entry into force)</td>
</tr>
<tr>
<td>Budapest Treaty on the International Recognition of Microorganisms</td>
<td>December 17, 2001 (Party to treaty)</td>
</tr>
<tr>
<td>for the Purposes of Patent Procedure 1977</td>
<td></td>
</tr>
</tbody>
</table>

By virtue of such membership, convention applications for the registration of trademarks, patents, and designs are accepted with the priority date claim; copyright infringement suits can be instituted in India based on copyright created in the convention countries.

The Madrid Protocol

The Madrid System, administered by the International Bureau of World Intellectual Property Organization (WIPO), Geneva, permits the filing, registration and maintenance of trademark rights in more than one jurisdiction on a global basis. This system comprises two treaties; the Madrid Agreement concerning the International Registration of Marks, which was concluded in 1891 and came into force in 1892, and the Protocol relating to the Madrid Agreement, which came into operation on April 1, 1996. India acceded to the relevant treaties in 2005 and in 2007. The new Trademarks (Amendment) Bill to amend the TM Act was introduced in the Parliament to implement the Madrid System in India in 2009. The Trade Marks (Amendment) Rules 2013, with provisions relating to the international registration of trademarks under the Madrid Protocol, came into force in India from 8th July, 2013.
14. Special Tribunals

Effective September 15, 2003, the Intellectual Property Appellate Board (Board) has been set up in Chennai (in the state of Tamil Nadu, India) with benches in Ahmedabad, Delhi, Mumbai and Kolkata. The Board has the jurisdiction to consider appeals from the decisions of the Registrar of Trade Marks and Registrar of GI and to consider cancellation / rectification cases of trademarks and GIs. The cases, which were pending before various High Courts with respect to the aforementioned matters stand transferred to the Board with effect from October 6, 2003. Setting up of the exclusive IP Board is expected to lead to an effective and speedy disposal of cases. The cases with respect to infringement and passing off will continue to be instituted in regular courts.
15. Tax Regime in India

Income tax in India is governed by the provisions of the Income-tax Act, 1961 (“ITA”), which lays down elaborate provisions in respect of chargeability to tax, determination of residency, computation of income, transfer pricing, etc. All residents are subject to tax in India on their worldwide income, whereas non-residents are taxed only on Indian source income, i.e. income that is received in India or accrues or arises to them in India or is deemed to accrue or arise or is deemed to be received in India.\(^8\) Every company that is chargeable to tax in India is required to file a tax return in India.\(^8\)

I. Residency\(^8\) and Scope of Income

A company incorporated under the laws of India is deemed to be a resident of India for Indian tax purposes. A company incorporated outside India is deemed to be resident in India if its place of effective management (“POEM”)\(^9\) is in India. Income of an Indian company (which would include an Indian subsidiary of a foreign company) is taxed in India at the rate of 30%.\(^9\) A foreign company is taxed at the rate of 40% on its business income earned in India, only if it has a Permanent Establishment (“PE”) or business connection\(^9\) in India. Section 90(2) of the ITA provides that where India has entered into a tax treaty with the Government of any other country for granting relief from double taxation, in relation to such a tax payer to whom such tax treaty applies, the provisions of the ITA would apply only to the extent they are more beneficial to the tax payer.\(^9\)

II. Deemed Indian Source Incomes

Royalties and fees for technical services (“FTS”) are taxable in India when they arise from sources within India.\(^9\) Royalties and FTS paid by a resident to a non-resident are generally taxable in India. However, if such royalties/FTS are paid with respect to a business or profession carried on by such resident outside India or for earning income from any source outside India, then such royalties and FTS are not taxable in India. Further, even payments of royalties or FTS made by one non-resident to another non-resident are brought within the Indian tax net, if such royalties/FTS are payable with respect to any business or profession carried on by such nonresident in India or for earning any income from a source in India.

Explanation 2 to section 9(1)(vi) and (vii) of ITA defines the terms “royalty” and FTS respectively to mean:

Royalty means consideration (including lump sum consideration but excluding any consideration which would be the income of the recipient chargeable under the head “Capital Gains”) for:

i. “the transfer of all or any rights (including the granting of a license) in respect of a patent, invention, model, design, secret formula or process or trademark or similar property; (It is pertinent to note that the payment for transfer of all or any rights in respect of any right, property or information includes transfer of all or any right for use or right to use

---

\(^8\) Section 4 and 5 of the ITA.

\(^8\) Section 139(1) of the ITA.

\(^8\) Section 6 of the ITA.

\(^9\) Inserted by Finance Act, 2016, w.e.f. 1-4-2017. As per Explan. to Section 6(3) of the ITA – “place of effective management means a place where key management and commercial decisions that are necessary for the conduct of business of an entity as a whole are, in substance made.”

\(^9\) The income tax rates mentioned in this paper are exclusive of the currently applicable surcharge at the rate of 7% and a 2% education cess on such income tax and surcharge.

\(^9\) Section 9(1)(x) of the ITA. The term ‘business connection’ is a term, which is used in the ITA and is analogous to the term ‘PE’ used in tax treaties.

\(^9\) Section 90(2) of the ITA.

\(^9\) Section 9(1)(vi), (vii) of the ITA.
a computer software (including granting of a licence) irrespective of the medium through which such right is transferred.)

ii. the imparting of any information concerning the working of, or the use of, a patent, invention, model, design, secret formula or process or trademark or similar property;

iii. the use of any patent, invention, model, design, secret formula or process or trademark or similar property;

iv. the imparting of any information concerning technical, industrial, commercial or scientific knowledge, experience or skill;

iv-a. the use or right to use any industrial, commercial or scientific equipment;

v. the transfer of all or any rights (including the granting of a license) in respect of any copyright, literary, artistic or scientific work including films or video tapes for the use in connection with television or tapes for the use in connection with radio broadcasting, but not including consideration for the sale, distribution or exhibition of cinematograph films; or

vi. the rendering of any services in connection with the activities referred to in sub-clauses (i) to (v).

With respect to the aforesaid definition of royalty it is important to note that for the purposes of determination of whether a payment for right, property or information is in the nature of royalty it is irrelevant whether the payer is in possession or control of such right, property or information or whether such right, property or information is used directly by the payer. Further, the location of such right, property or information is also not of essence.95

“Fees for technical services” means any consideration (including any lump sum consideration) for the rendering of any managerial, technical or consultancy services (including the provision of services of technical or other personnel) but does not include consideration for any construction, assembly, mining or like project undertaken by the recipient or consideration which would be income of the recipient chargeable under the head “Salaries”.

Royalties and FTS, which are chargeable to tax in India and are payable to non-residents who do not have a PE in India, are subject to a withholding tax at the rate 10% on gross basis.96 No deductions are allowed from the gross royalties or FTS. This rate may be reduced if there is a favorable provision in the tax treaty between India and the country of residence of the non-resident.

If the non-resident company having a PE in India receives royalties/FTS, which is chargeable to tax in India and the payment of such royalties/FTS is effectively connected to the PE in India, then such royalties/FTS would be liable to tax in India as business income at the rate of 40% on net basis.97 In such cases, expenditure incurred in this respect by the non-resident in earning the royalties/FTS would be allowable as a deduction.

India, does not have any special provisions for the taxation of computer software. Thus, the general rules of taxation of business income, FTS or royalties, as the case may be, are applied. The Central Board of Direct Taxes (“CBDT”) had constituted a High Powered Committee (“HPC”) in the year 1999 to advise the government with respect to any changes that may be required in the domestic law to address the taxation of electronic commerce. The HPC while making its recommendations had taken a different view on the taxation of 13 out of the 28 categories of e-commerce transactions examined by the Technical Advisory Group (“TAG”) in its report on “Treaty Characterisation of Electronic Commerce Payments” dated February 1, 2001. On account of several representations made by the industry and professionals98, the recommendations of the HPC have not yet been adopted.

96. Section 115A(1)(b) of the ITA.
97. Section 44 DA of the ITA
98. Our recommendations can be found at www.nishithdesai.com/eComTaxpert/ecomtaxpertnew.html
III. Tax Incentives

Tax incentives are available to a company engaged in the manufacture and export of goods and services if the export is undertaken via a facility set up in a Special Economic Zone. In such a case, a tax exemption equivalent to 100% of the profits derived by such unit from export of goods and services is available for the first 5 years of its operations and a 50% tax exemption on such profits is available for subsequent five years. Subject to fulfillment of specific conditions regarding creation of a reserve and utilization of profits, a 50% tax exemption for an additional 5 years may also be claimed.99

Some of the other tax incentives available include incentives for a company engaged in the business of bio-technology or in any business of manufacture or production (except certain specified businesses), whereby such companies can claim a deduction equivalent up to 200% of the expenditure incurred for in-house R&D facilities (not being expense in the nature of cost of land and building) that have been approved by Department of Scientific and Industrial Research, Ministry of Science and Technology, Govt. of India.100 In other cases, a deduction shall be allowed for any expenditure laid out on scientific research related to the business carried out by the company is allowed.101

IV. Depreciation

Depreciation is allowed on intangible assets in the nature of know-how, patents, copyrights, trade names, licenses, franchises or any other business or commercial rights of a similar nature acquired on or after April 1, 1998 at the rate of 25% as per written down value method. Computer software is entitled to depreciation at a higher rate i.e. 60%.

V. Second tier Royalty

As discussed above, payments of royalties/FTS made by one non-resident to another non-resident are brought within the Indian tax net, if such royalties/FTS are payable with respect to any business or profession carried on by such non-resident in India or for earning any income from any source in India. Thus, for example if any royalties/FTS are payable by a non-resident sub-licensor to a non-resident licensor, the same could be subject to tax in India if they are payable by the sub-licensor in respect of any business or profession carried on by him in India or for earning any income from any source in India. However, under certain tax treaties, which India has entered into, such second tier royalty/FTS can be taxed in India only if the sub-licensor has a PE in India and the royalties/FTS are borne by the PE.

Recent landmark judgment in relation to situs of Intangible Property.

VI. CUB Pty Ltd. v. Union of India102 - Foster’s case

Foster’s Australia Limited (‘the Applicant’) was owner of trade name, trade markbrand and other intellectual property related to Foster’s Beer. An exclusive license was granted by it to Foster’s India Limited for the purposes of brewing, packaging and using the trademark along with using “Foster’s” as part of their corporate name.

Foster’s Australia entered into a share transfer agreement with another foreign company outside India to transfer the rights and title in trademarks, Foster’s brand intellectual property and Foster’s brewing intellectual property.

The controversial issue in this case was whether the consideration received on sale of trademark by the Company whose license has been exclusively granted to an Indian Subsidiary be taxed in India or not.

99. Section 10AA of the ITA
100. Section 35 (2AB) of the ITA.
101. Section 35 (1) of the ITA
102. [2016] 288 CTR 361 (Delhi)
A. Authority of Advance Ruling

It was decided that irrespective of the fact that intellectual property is owned by Foster's Australia, it should be taxed in India as the sale transaction was about the trademarks that were exclusively licensed and used in India therefore the sale consideration that flowed should be taxed in India and not where the owner of the intellectual property was seated.

B. Delhi High Court

The High court did not employ the reasoning of the AAR. It opined that as per the internally accepted principle of *mobilia sequuntur personam*, the situs of the intangible asset would have closest proximity with the situs of the owner of the asset. This rule has an exception too i.e. the principle would not apply if the domestic laws of any country is contrary to it but the Indian law in the present case does not have such a provision hence the exception would not get triggered.

Basis the above principle the court passed the judgment in the favor of taxpayer and said that situs of the intangible property would be said to be outside India as the owner of the said property is Foster's Australia and not Foster's India.

C. GST – The way forward

Following the passage of the Constitution Amendment Bill for Goods and Services Tax (“GST”) by both houses of the parliament and subsequent approval by the president, the GST regime is proposed to come into effect from April 2017. GST seeks to replace all indirect taxes related to goods and services with a single structured regime and is likely to have far reaching effects on the Indian economy, including the intellectual property regime.

In view of this, it must be noted that the taxability of software and software related products had previously undergone extensive litigation. The controversy follows from the difficulty in determining whether a transaction related to software leads to sale of goods or provision of services, thereby leading to the age old question of whether such transactions should be subject to Value Added Tax (“VAT”) or service tax. However GST seeks to put an end to this controversy by deeming that *temporary transfer or permitting the use or enjoyment of any intellectual property* would be considered to be supply of services and subject to a single rate of tax which could range from 5 to 28 percent depending upon the nature of services provided.
16. Enforcement

I. Place of Filing of Infringement Actions

In India, infringement and passing-off actions can be instituted by filing a suit in the appropriate court. All IP laws state the appropriate court in which such suits can be instituted. For example, under the TM Act, suits for trademark infringement or passing off can be filed in the district court within the local limits of whose jurisdiction, at the time of the institution of the suit / other proceedings, the plaintiff / one of the plaintiffs (for example, registered proprietor, registered user) actually and voluntarily resides or carries on business or personally works for gain. Under the Copyright Act there is a similar provision as well.

Section 62(1) of the Copyright Act clearly specifies that every suit instituted in relation to the infringement of a copyright in any work or the infringement of any other right conferred by this Act shall be instituted in the district court having jurisdiction. Therefore, any suit in relation to the infringement of a copyright has to be instituted in the relevant district court having jurisdiction. However, as per section 62(2) of the Copyright Act, the term “district court” has been qualified for the purpose of the Copyright Act to mean “a district court within whose jurisdiction the concerned plaintiff resides or carries on business”. Resultantly, an individual may file a suit regarding infringement of a copyright in the jurisdiction where he resides or primarily carries on his business, despite the fact that the actual infringement took place in another jurisdiction.

However, the Supreme Court has clarified that such provisions have to be given a purposive interpretation while opining that “the provisions of section 62 of the Copyright Act and section 134 of the Trade Marks Act have to be interpreted in the purposive manner. No doubt about it that a suit can be filed by the plaintiff at a place where he is residing or carrying on business or personally works for gain. He need not travel to file a suit at a place where defendant is residing or cause of action wholly or in part arises. However, if the plaintiff is residing or carrying on business etc. at a place where cause of action, wholly or in part, has also arisen, he has to file a suit at that place.”105

II. Interim Injunctions

In India, court cases often reach a final hearing after twelve to sixteen years from the date of their filing. Therefore, obtaining an interim injunction becomes crucial for the plaintiffs, especially in intellectual property lawsuits. The damages are awarded only after the final hearing.

Indian courts also grant injunctions in a *quia timet* (anticipatory) action if the plaintiff proves that defendant’s activities or proposed activities would lead to violation of plaintiffs’ rights.

III. Interim Relief

After filing the suit, the plaintiffs can seek ad interim and interim relief, including injunctions, Mareva Injunctions, an appointment of the commissioner or the court receiver, Anton Piller orders, John Doe (Ashok Kumar) orders, and other orders, such as discovery and inspection, or orders for interrogatories.

Ad interim and interim injunctions are granted under Order 39, Rules 1 and 2, read with Section 151 of the Code of Civil Procedure, 1908. The Supreme Court of India in Wander Ltd. v. Antox India (P) Ltd. laid down the principles for the granting of an interim injunction. For the grant of such ad interim and interim orders, the plaintiff has to show that he has a prima facie

103. Section 62(1) of the Copyright Act 1957
104. Section 62(1) of the Copyright Act 1957
105. Indian Performing Rights Society Ltd. v. Sanjay Dalmia & Anr. CA No.10643-10644 of 2010
case, that the balance of convenience is in his favor, and the hardship suffered by the plaintiff would be greater if the order is not granted. If the plaintiff is able to convince the Court of these points, then plaintiff can obtain an ad interim and interim injunction within a couple of days of filing of the suit. Some courts also grant ex parte injunctions if a strong case is made.

Generally, a plaintiff is required to give at least forty eight hours' notice to the defendant for a hearing of the interim application. If the defendant appears before the court, he may be granted further time to file his reply and the plaintiff in turn may be allowed to file his response to the defendant's reply. The hearing of the interim applications could go on for three to four days, depending upon the complexity of the matter. Both the parties have the liberty to file an appeal from the interim order and subsequently the parties may have to fight the matter even up to the Supreme Court of India. The appellate court also has the power to grant interim orders pending the final hearing of appeal.

Indian courts have realized the importance of protecting IP and have started granting innovative orders. Recently, of India’s 40,000 cable operators, only 3,500 had obtained licenses from the owners of the rights to broadcast the World Cup (soccer) in India. Given the transitory nature of both the World Cup rights and the cable operators themselves (and the normal time frame of the Indian courts), the Delhi High Court granted an order against anonymous defendants whereby the rights owner, accompanied by a court-appointed commissioner, were able to locate the unlicensed cable operators and shut down the unauthorized World Cup transmissions. Such orders are called Ashok Kumar orders in India, equivalent to John Doe orders.

The damages are awarded only after the final hearing of the suit, which could take twelve to sixteen years, as stated earlier. Traditionally Indian courts have been slow and conservative in granting damages in intellectual property matters. However, recently the courts have started granting punitive and exemplary damages in the intellectual property law matters. In the matter of Time Incorporated v. Lokesh Srivastava and Anr. \textsuperscript{107} the Delhi Court observed:

\begin{quote}
“This Court has no hesitation in saying that the time has come when the Courts dealing actions for infringement of trademarks, copy rights, patents etc. should not only grant compensatory damages but award punitive damages also with a view to discourage and dishearten law breakers who indulge in violations with impunity out of lust for money so that they realize that in case they are caught, they would be liable not only to reimburse the aggrieved party but would be liable to pay punitive damages also, which may spell financial disaster for them.”
\end{quote}

\textsuperscript{107} 2005 (3) PTC 3 (Del)
17. Measures to Check Import of Infringing Goods

In its circular dated October 29, 2007 ("Circular"), the Central Board of Excise & Customs under the Ministry of Finance, issued instructions to the relevant customs and excise authorities, for implementation of the Intellectual Property Rights (Imported Goods) Enforcement Rules, 2007 ("IPR Rules") dated May 8, 2007. The IPR Rules emanate from Section 11 of the Customs Act, 1952 which empowers the Central Government to prohibit import or export of goods infringing intellectual property rights. Before the notification of the IPR Rules, the notification of January 18, 1964, prohibited import of goods infringing trademarks and design. The IPR Rules prohibit import of goods infringing patent, copyright and geographical indications as well.

I. Features of the IPR Rules

The Circular contemplates to implement a centralized web-enabled registration system. The Circular emphasizes that under the IPR Rules, the determination of whether the goods are infringing or not would be in accordance with the applicable IP legislation. For smooth implementation of the IPR regime, the Circular stipulates establishment of an IPR Cell in each Custom House. The IPR Cell is vested with the responsibility of verifying the applications, completing web-enabled registration formalities and making correspondence with the Risk Management Division and other Customs formations. Further, any import involving suspected infringement of IPRs would be handled by the IPR Cell. Any instance of suo-moto interdiction of the import consignments by the Customs, involving possible infringements, would also be referred to such IPR Cell. In view of the fact that these proceedings might require the customs to determine right in personam, participation of the rights holder is made mandatory. The qualification and training imparted to the members of the IPR Cell will play a crucial role in effective implementation of the IPR Rules. Abstention on the part of the right holder would result in discontinuation of the proceedings and release of the goods.

The other principle features of the IPR Rules are summarized below:

- adequate protection to the rightful importer;
- adequate protection to the Customs for bona fide act;
- suo-moto action by the Customs in specified circumstances;
- disposal of the confiscated goods;
- no action against goods of non commercial nature contained in personal baggage or sent in small consignments intended for personal use of the importer.

II. Procedure for Procuring Registration under the IPR Rules

The IPR Rules read with the Circular lay down a detailed procedure to be followed by the right holders as also by the Customs authorities for seeking suspension or release of infringing goods.

- A right holder would have to give a notice for registration requesting the Customs Department to suspend clearance of infringing goods at the port of such goods. Such notices can be filed online.

- The information submitted by the right holder is required to be cross verified by the Customs from the concerned authorities with whom the rights are registered in accordance with the parent IP enactments.

- If the information is found to be wrong or false, then registration accorded to the rights holder may be cancelled. Further, an amendment to the registration would require
the rights holder to undergo the entire process of registration as if it were a fresh application. In relation to particular goods there are separate IP registrations, then a separate registration is required to be done for each type of IP.

- Upon satisfaction by the authorities, the notice may be rejected or registered for a minimum period of five years (or less if so requested by the rights holder).

- There are certain conditions as to the provision of bond, surety and security that the rights holder needs to satisfy. This is primarily to avoid frivolous registrations. The bond amount is equal to 110% of the value of goods while the security deposit is 25% of the bond value.
Conclusion

The importance of IPR and their protection is acknowledged the world over as essential to business. In tune with the world scenario, India too has recognized the value of IP, which recognition has been consistently upheld by legislators, courts and the industry. India is now a signatory to various IP treaties and conventions. This has helped India become more attuned to the world's approaches and attitudes towards IP protection. India has already taken steps to comply with its obligations under TRIPS, and the Indian IP law regime is almost at par with the regimes of many developed nations. Historically, the enforcement of IPRs in India was not particularly effective. However, recent judicial rulings and steps taken by various enforcement agencies demonstrate that India is gearing up for effective protection and enforcement of IPRs. The Indian police has established special IP cells where specially trained police officers have been appointed to monitor IP infringement and cyber crimes. Various Indian industries have also become more proactive in protecting their IPRs. For example, the Indian Music Industry, an association of music companies, which is headed by a retired senior police official, has taken similar proactive steps to combat music piracy. All in all, India has taken many positive steps toward improving its IPR regime and is expected to do much more in the coming years to streamline itself with the best practices in the field of intellectual property rights.
About NDA

At Nishith Desai Associates, we have earned the reputation of being Asia’s most Innovative Law Firm – and the go-to specialists for companies around the world, looking to conduct businesses in India and for Indian companies considering business expansion abroad. In fact, we have conceptualized and created a state-of-the-art Blue Sky Thinking and Research Campus, Imaginarium Aligunj, an international institution dedicated to designing a premeditated future with an embedded strategic foresight capability.

We are a research and strategy driven international firm with offices in Mumbai, Palo Alto (Silicon Valley), Bangalore, Singapore, New Delhi, Munich, and New York. Our team comprises of specialists who provide strategic advice on legal, regulatory, and tax related matters in an integrated manner basis key insights carefully culled from the allied industries.

As an active participant in shaping India’s regulatory environment, we at NDA, have the expertise and more importantly – the VISION – to navigate its complexities. Our ongoing endeavors in conducting and facilitating original research in emerging areas of law has helped us develop unparalleled proficiency to anticipate legal obstacles, mitigate potential risks and identify new opportunities for our clients on a global scale. Simply put, for conglomerates looking to conduct business in the subcontinent, NDA takes the uncertainty out of new frontiers.

As a firm of doyens, we pride ourselves in working with select clients within select verticals on complex matters. Our forte lies in providing innovative and strategic advice in futuristic areas of law such as those relating to Blockchain and virtual currencies, Internet of Things (IOT), Aviation, Artificial Intelligence, Privatization of Outer Space, Drones, Robotics, Virtual Reality, Ed-Tech, Med-Tech & Medical Devices and Nanotechnology with our key clientele comprising of marquee Fortune 500 corporations.

The firm has been consistently ranked as one of the Most Innovative Law Firms, across the globe. In fact, NDA has been the proud recipient of the Financial Times – RSG award 4 times in a row, (2014-2017) as the Most Innovative Indian Law Firm.

We are a trust based, non-hierarchical, democratic organization that leverages research and knowledge to deliver extraordinary value to our clients. Datum, our unique employer proposition has been developed into a global case study, aptly titled ‘Management by Trust in a Democratic Enterprise,’ published by John Wiley & Sons, USA.

A brief chronicle our firm’s global acclaim for its achievements and prowess through the years -

- **AsiaLaw 2019**: Ranked ‘Outstanding’ for Technology, Labour & Employment, Private Equity, Regulatory and Tax
- **Merger Market 2018**: Fastest growing M&A Law Firm
- **IFLR 1000 (International Financial Review - a Euromoney Publication)**: Tier 1 for TMT, Private Equity
- **IFLR**: Indian Firm of the Year (2010-2013)
- **Legal 500 2018**: Tier 1 for Disputes, International Taxation, Investment Funds, Labour & Employment, TMT
• **Chambers and Partners Asia Pacific (2017 – 2018):** Tier 1 for Labour & Employment, Tax, TMT

• **IDEX Legal Awards 2015:** Nishith Desai Associates won the “M&A Deal of the year”, “Best Dispute Management lawyer”, “Best Use of Innovation and Technology in a law firm” and “Best Dispute Management Firm”

Research @ NDA

Research is the DNA of NDA. In early 1980s, our firm emerged from an extensive, and then pioneering, research by Nishith M. Desai on the taxation of cross-border transactions. The research book written by him provided the foundation for our international tax practice. Since then, we have relied upon research to be the cornerstone of our practice development. Today, research is fully ingrained in the firm’s culture.

Our dedication to research has been instrumental in creating thought leadership in various areas of law and public policy. Through research, we develop intellectual capital and leverage it actively for both our clients and the development of our associates. We use research to discover new thinking, approaches, skills and reflections on jurisprudence, and ultimately deliver superior value to our clients. Over time, we have embedded a culture and built processes of learning through research that give us a robust edge in providing best quality advices and services to our clients, to our fraternity and to the community at large.

Every member of the firm is required to participate in research activities. The seeds of research are typically sown in hour-long continuing education sessions conducted every day as the first thing in the morning. Free interactions in these sessions help associates identify new legal, regulatory, technological and business trends that require intellectual investigation from the legal and tax perspectives. Then, one or few associates take up an emerging trend or issue under the guidance of seniors and put it through our “Anticipate-Prepare-Deliver” research model.

As the first step, they would conduct a capsule research, which involves a quick analysis of readily available secondary data. Often such basic research provides valuable insights and creates broader understanding of the issue for the involved associates, who in turn would disseminate it to other associates through tacit and explicit knowledge exchange processes. For us, knowledge sharing is as important an attribute as knowledge acquisition.

When the issue requires further investigation, we develop an extensive research paper. Often we collect our own primary data when we feel the issue demands going deep to the root or when we find gaps in secondary data. In some cases, we have even taken up multi-year research projects to investigate every aspect of the topic and build unparallel mastery. Our TMT practice, IP practice, Pharma & Healthcare/Med-Tech and Medical Device, practice and energy sector practice have emerged from such projects. Research in essence graduates to Knowledge, and finally to Intellectual Property.

Over the years, we have produced some outstanding research papers, articles, webinars and talks. Almost on daily basis, we analyze and offer our perspective on latest legal developments through our regular “Hotlines”, which go out to our clients and fraternity. These Hotlines provide immediate awareness and quick reference, and have been eagerly received. We also provide expanded commentary on issues through detailed articles for publication in newspapers and periodicals for dissemination to wider audience. Our Lab Reports dissect and analyze a published, distinctive legal transaction using multiple lenses and offer various perspectives, including some even overlooked by the executors of the transaction. We regularly write extensive research articles and disseminate them through our website. Our research has also contributed to public policy discourse, helped state and central governments in drafting statutes, and provided regulators with much needed comparative research for rule making. Our discourses on Taxation of eCommerce, Arbitration, and Direct Tax Code have been widely acknowledged. Although we invest heavily in terms of time and expenses in our research activities, we are happy to provide unlimited access to our research to our clients and the community for greater good.

As we continue to grow through our research-based approach, we now have established an exclusive four-acre, state-of-the-art research center, just a 45-minute ferry ride from Mumbai but in the middle of verdant hills of reclusive Alibaug-Raigadh district. Imaginarium AliGunjan is a platform for creative thinking; an apolitical ecosystem that connects multi-disciplinary threads of ideas, innovation and imagination. Designed to inspire ‘blue sky’ thinking, research, exploration and synthesis, reflections and communication, it aims to bring in wholeness – that leads to answers to the biggest challenges of our time and beyond. It seeks to be a bridge that connects the futuristic advancements of diverse disciplines. It offers a space, both virtually and literally, for integration and synthesis of knowhow and innovation from various streams and serves as a dais to internationally renowned professionals to share their expertise and experience with our associates and select clients.

We would love to hear your suggestions on our research reports. Please feel free to contact us at research@nishithdesai.com
Intellectual Property Law in India
